Current Perspectives from O'Reilly Radar O'Reilly Radar Team,2011-08-30 This collection represents the full spectrum of data related content we've published on O'Reilly Radar over the last year Mike Loukides kicked things off in June 2010 with What is data science and from there we've pursued the various threads and themes that naturally emerged Now roughly a year later we can look back over all we've covered and identify a number of core data areas Data issues The opportunities and ambiguities of the data space are evident in discussions around privacy the implications of data centric industries and the debate about the phrase data science itself The application of data products and processes A data product can emerge from virtually any domain including everything from data startups to established enterprises to media journalism to education and research Data science and data tools The tools and technologies that drive data science are of course essential to this space but the varied techniques being applied are also key to understanding the big data arena The business of data Take a closer look at the actions connected to data the finding organizing and analyzing that provide organizations of all sizes with the information they need to compete *Designing Great Data Products* Jeremy Howard,Margit Zwemer, Mike

Loukides,2012-03-23 In the past few years we've seen many data products based on predictive modeling These products range from weather forecasting to recommendation engines like Amazon's Prediction technology can be interesting and mathematically elegant but we need to take the next step going from recommendations to products that can produce optimal strategies for meeting concrete business objectives We already know how to build these products they've been in use for the past decade or so but they're not as common as they should be This report shows how to take the next step to go from simple

predictions and recommendations to a new generation of data products with the potential to revolutionize entire industries

Cloud Data Management Liang Zhao, Sherif Sakr, Anna Liu, Athman Bouguettaya, 2014-07-08 In practice the design and architecture of a cloud varies among cloud providers We present a generic evaluation framework for the performance availability and reliability characteristics of various cloud platforms We describe a generic benchmark architecture for cloud databases specifically NoSQL database as a service It measures the performance of replication delay and monetary cost Service Level Agreements SLA represent the contract which captures the agreed upon guarantees between a service provider and its customers The specifications of existing service level agreements SLA for cloud services are not designed to flexibly handle even relatively straightforward performance and technical requirements of consumer applications We present a novel approach for SLA based management of cloud hosted databases from the consumer perspective and an end to end framework for consumer centric SLA management of cloud hosted databases The framework facilitates adaptive and dynamic provisioning of the database tier of the software applications based on application defined policies for satisfying their own SLA performance requirements avoiding the cost of any SLA violation and controlling the monetary cost of the allocated computing resources In this framework the SLA of the consumer applications are declaratively defined in terms of goals which are subjected to a number of constraints that are specific to the application requirements The framework continuously monitors the application defined SLA and automatically triggers the execution of necessary corrective actions scaling out in the database tier when required The framework is database platform agnostic uses virtualization based database replication mechanisms and requires zero source code changes of the cloud hosted software applications *Planning for Big Data* Edd

Wilder-James, 2012-03-12 In an age where everything is measurable understanding big data is an essential From creating new data driven products through to increasing operational efficiency big data has the potential to make your organization both more competitive and more innovative As this emerging field transitions from the bleeding edge to enterprise infrastructure it s vital to understand not only the technologies involved but the organizational and cultural demands of being data driven Written by O Reilly Radar s experts on big data this anthology describes The broad industry changes heralded by the big data era What big data is what it means to your business and how to start solving data problems The software that makes up the Hadoop big data stack and the major enterprise vendors Hadoop solutions The landscape of NoSQL databases and their relative merits How visualization plays an important part in data work **AWS Administration - The Definitive**
