Phyllosphere Microbial Plant Pathogens: Detection and Crop Disease Management P.

Narayanasamy,2024-08-15 This book provides comprehensive knowledge of the methods of detection and identification of phyllosphere microbial pathogens and the management of different kinds of diseases caused by them in various crops Interactions between pathogens and host plants result in the induction of defense responses expressed via molecular signals from initiation of infection to systemic progression of pathogen invasion in susceptible plants and contrasting signals in resistant plants leading to inhibition of pathogen development through activation of preinfectious and postinfectious defense responses These are critically discussed The author describes the intricate and complex competitive activities of the pathogens and host plants in a molecular warfare that the host plant must win to break the link in the pathogens life cycle allowing the development of disease management strategies based on the principles of exclusion eradication and immunization Integration of strategies concerning the development of cultivars resistant to pathogens through breeding and biotechnological techniques application of biotic and abiotic inducers of resistance to pathogens and use of disease free seeds and propagules that are complementary to each other along with effective cultural practices are emphasized This book presents information gathered through an extensive literature search to help researchers and graduate students in agricultural sciences identify research gaps and successfully complete their research projects

Biology of the Grapevine

Michael G. Mullins,Alain Bouquet,Larry E. Williams,1992-07-16 Information on the evolution taxonomy morphology anatomy physiology and genetics of grapevines has been scarce and thinly spread in the literature on horticulture and the plant sciences This book aims to provide a concise but comprehensive overview of the biology and cultivation of the grapevine accessible to all concerned with viticulture After a description of the essential features of viticulture including a concise history from antiquity to modern times the taxonomy of the grapevine and the evolutionary processes which gave rise to the diversity within the Vitaceae is considered Particular attention is paid to the genera Vitis and Muscadinia which are considered a reserve of genetic variation for the improvement of grapevines A description of the vegetative and reproductive anatomy of the grapevine precedes a full discussion of the developmental and environmental physiology of these fascinating and economically important plants The concluding chapter considers the potential for genetic improvement of grapevines and includes coverage of the problems encountered and the methods and strategies employed in breeding for scions and rootstocks

Biological Management of Diseases of Crops P.

Narayanasamy,2013-06-28 Biological disease management tactics have emerged as potential alternative to chemical application for containing crop diseases Biotic and

abiotic biological control agents BCAs have been demonstrated to be effective against diseases caused by microbial plant pathogens Combination of biotic and abiotic agents leads to synergism and consequent improvement in the effectiveness of disease control It is essential to assay the biocontrol potential of all isolates species of fungal bacterial and viral biocontrol agents by different techniques in vitro and under greenhouse and field conditions and to precisely identify and differentiate the most effective isolates from less effective ones by employing biological immunological and nucleic acid based assays

Managing Wine Quality Andrew G. Reynolds, 2010-04-28 Many aspects of both grape production and winemaking influence wine sensory properties and stability Progress in research helps to elucidate the scientific basis of quality variation in wine and suggest changes in viticulture and oenology practices The two volumes of Managing wine quality review developments of importance to wine producers researchers and students The focus is on recent studies advanced methods and likely future technologies The first volume Viticulture and wine quality opens with chapters reviewing current understanding of wine aroma colour taste and mouthfeel Part two focuses on the measurement of grape and wine properties Topics covered include instrumental analysis of grape must and wine sensory evaluation and wine authenticity and traceability The effects of viticulture technologies on grape composition and wine quality attributes are the subject of part three Terroir viticultural and vineyard management practices fungal contaminants and grape processing equipment are among the areas discussed With authoritative contributions from experts across the world s winemaking regions Managing wine quality Volume1 Oenology and wine quality is an essential reference for all those involved in viticulture and oenology wanting to explore new methods understand different approaches and refine existing practices Reviews current understanding of wine aroma colour taste and mouthfeel Details the measurement of grape and wine properties through instrumental analysis must and wine and sensory evaluation Examines viticulture and vineyard management practices fungal contaminants and processing equipment

The Mediterranean Genetic Code Barbara Sladonja, Danijela Poljuha, 2013-04-10 The book The Mediterranean Genetic Code Grapevine and Olive collects relevant papers documenting the results of research in grapevine and olive genetics as a contribution to overall compendium of the existing biodiversity for both species with insight into molecular mechanisms responsible for their desirable and important traits Book encompasses a broad and diverse palette of different topics related to grapevine and olive genetics with no areal or any other strict limitation keeping the title as a loose frame for borderless science Divided in four sections it takes us for a molecular walk through different levels of genetic variability uncovering the remains of still existing wild populations and treasures of neglected local peculiarities weaving the network from plant to product and back to the beginning to the hearth of all questions asked and answers hidden in genetics
