

## Chapter 4

### Consumer Choice

---

#### Solutions to Review Questions

1. If the consumer has a positive marginal utility for each of two goods, why will the consumer always choose a basket on the budget line?

Relative to any point on the budget line, when the consumer has a positive marginal utility for all goods she could increase her utility by consuming some basket outside the budget line. However, baskets outside the budget line are unaffordable to her, so she is constrained (as in “constrained optimization”) to choosing the most preferred basket that lies along the budget line.

2. How will a change in income affect the location of the budget line?

An increase in income will shift the budget line away from the origin in a parallel fashion expanding the set of possible baskets from which a consumer may choose. A decrease in income will shift the budget line in toward the origin in a parallel fashion, reducing the set of possible baskets from which a consumer may choose.

3. How will an increase in the price of one of the goods purchased by a consumer affect the location of the budget line?

If the price of one of the goods increases, the budget line will rotate inward on the axis for the good with the price increase. The budget line will continue to have the same intercept on the other axis. For example, suppose someone buys two goods, cups of coffee and doughnuts, and suppose the price of a cup of coffee increases. Then the budget line will rotate as in the following diagram:

**New Insights into the Theory of Giffen Goods** Wim Heijman, Pierre Mouche, 2011-10-12 One might expect that after their identification in the 19th century all aspects of Giffen goods would have been studied by now This appears not to be the case This book contains the latest insights into the theory of Giffen goods In the past surprisingly few goods could be categorized as Giffen This may be because of a lack of understanding of the character of these goods Therefore the theories explained in this book may also produce a solid basis for further empirical research in the field Experts throughout the world have contributed to this book which predominantly pursues a mathematically rigorous approach It may be used by researchers in the field of fundamental economics and in graduate level courses in advanced microeconomics

**Supply Chain Planning** Hans-Otto Günther, Herbert Meyr, 2009-03-05 In recent years supply chain planning has emerged as one of the most challenging problems in the industry As a consequence the planning focus is shifting from the management of plant specific operations to a holistic view of the various logistics and production stages that is an approach in which suppliers

production plants and customers are considered as constituents of an integrated network. A major driving force behind this development lies in the globalization of the world economy which has facilitated the co-operation between different partners working together in world-wide logistics networks. Hence considerable cost savings can be gained from optimizing the structure and the operations of complex supply networks linking plants, suppliers, distribution centres and customers. Consequently to improve the performance of the entire logistic chain, more sophisticated planning systems and more effective decision support are needed. Clearly successful applications of supply chain management have driven the development of advanced planning systems (APS) which are concerned with supporting decision-making activities at the strategic, tactical and operational decision level. These software packages basically rely on the application of quantitative methods which are used to model the underlying complex decision problems considering the limited availability of resources and the need to react on time to customer orders. The core module at the mid-term level of APS comprises operational supply chain planning. In many industries, production stages are assigned to different plants and distribution centres have been established at geographically dispersed locations.
