Model Mitosis As Part Of The Cell Cycle:

Mathematical Modelling of the Cell Cycle Stress Response Elahe Radmaneshfar, 2013-10-08 The cell cycle is a sequence of biochemical events that are controlled by complex but robust molecular machinery This enables cells to achieve accurate self reproduction under a broad range of conditions Environmental changes are transmitted by molecular signaling networks which coordinate their actions with the cell cycle This work presents the first description of two complementary computational models describing the influence of osmotic stress on the entire cell cycle of *S cerevisiae* Our models condense a vast amount of experimental evidence on the interaction of the cell cycle network components with the osmotic stress pathway Importantly it is only by considering the entire cell cycle that we are able to make a series of novel predictions which emerge from the coupling between the molecular components of different cell cycle phases The model based predictions are supported by experiments in *S cerevisiae* and moreover have recently been observed in other eukaryotes Furthermore our models reveal the mechanisms that emerge as a result of the interaction between the cell cycle and stress response networks

Mathematical Models in Biological Discovery D.L. Solomon, C.F. Walter, 2013-03-13 When I was asked to help organize an American Association for the Advancement of Science symposium about how mathematical models have contributed to biology I agreed immediately The subject is of immense importance and wide spread interest However too often it is discussed in biologically sterile environments by mutual admiration society groups of theoreticians many of whom have never seen and most of whom have never done an original scientific experiment with the biological materials they attempt to describe in abstract and often prejudiced terms The opportunity to address the topic during an annual meeting of the AAAS was irresistible In order to try to maintain the integrity of the original intent of the symposium it was entitled Contributions of Mathematical Models to Biological Discovery This symposium was organized by Daniel Solomon and myself held during the 141st annual meeting of the AAAS in New York during January 1975 sponsored by sections G and N Biological and Medical Sciences of the AAAS and the North American Regions of the Biometric Society and supported by grant BMS 75 0280 from the National Science Foundation What follows in this volume are papers by nine of the participants who not only felt that they had something to say in a symposium entitled Contributions of Mathematical Models to Biological Discovery but who also were willing to record their ideas in more detail here

Campbell, 2014-12-15 Thousands of imaginative scientists over more than a century have revealed the fascinating story of intracellular calcium through a pathway of ingenious invention and discovery Intracellular Calcium the

definitive book on this topic reveals The pathway of discovery and invention of intracellular calcium over more than 100 years The evidence for intracellular calcium as a universal switch in all animal plant fungal and microbial cells How the components required for calcium signalling are named and classified The ingenious technology which has been developed to study intracellular calcium How calcium is regulated inside cells and how it works to trigger an event The role of intracellular calcium in disease cell injury and cell death How many drugs work through the calcium signalling system How intracellular calcium is involved in the action of many natural toxins How the intracellular calcium signalling system has evolved over 4000 million years showing why it was crucial to the origin of life A key principle presented throughout the book is the molecular variation upon which the intracellular calcium signalling system depends This variation occurs within the same cell type and between cells with different functions providing the invisible matrix upon which Darwin and Wallace s Natural Selection depends Featuring more than 100 figures including detailed chemical structures as well as pictures of key pioneers in the field a bibliography of more than 1500 references as well as detailed subject and organism indices this definitive work provides a unique source of scholarship for teachers and researchers in the biomedical sciences and beyond
