General Technical Report PNW-GTR, 2007 Ecology and Management of Morels Harvested from the Forests of Western North America, 2007 Morels are prized edible mushrooms that fruit sometimes prolifically in many forest types throughout western North America. They are collected for personal consumption and commercially harvested as valuable special nontimber forest products. Large gaps remain, however, in our knowledge about their taxonomy, biology, ecology, cultivation, safety, and how to manage forests and harvesting activities to conserve morel populations and ensure sustainable crops. This publication provides forest managers, policymakers, mycologists, and mushroom harvesters with a synthesis of current knowledge regarding these issues, regional summaries of morel harvesting and management, and a comprehensive review of the literature.

Life, Re-Scaled Liliane Campos, Pierre-Louis Patoine, 2022-10-11 This edited volume explores new engagements with the life sciences in contemporary fiction, poetry, comics, and performance. The gathered case studies investigate how recent creative work reframes the human within microscopic or macroscopic scales, from cellular biology to systems ecology, and engages with the ethical, philosophical, and political issues raised by the twenty-first century's shifting views of life. The collection thus examines literature and performance as spaces that shape our contemporary biological imagination. Comprised of thirteen chapters by an international group of academics, *Life Re-Scaled: The Biological Imagination in Twenty-First Century Literature and Performance* engages with four main areas of biological study: invisible scales (cells, microbes, and mycelium), neuro-medical imaging and diagnosis, pandemic imaginaries, and ecological scales. The authors examine these concepts in emerging forms such as plant theatre, climate change art, ecofiction, and pandemic fiction, including the work of Jeff Vandermeer, Jon McGregor, Jeff Lemire, and Extinction Rebellion's Red Rebel Brigade performances. This valuable resource moves beyond the biological paradigms that were central to the nineteenth and twentieth centuries to outline the specificity of a contemporary imagination. *Life Re-Scaled* is crucial reading for academics, scholars, and authors alike, as it proposes an

unprecedented overview of the relationship between literature performance and the life sciences in the twenty first century

Derrick Jensen, 2012-07-03

In an age marked by seemingly unstoppable environmental collapse and the urgent quest for solutions, environmental philosopher Derrick Jensen, the voice of the growing deep ecology movement, reveals for us new seeds of hope. Here, for the first time, in *The Derrick Jensen Reader*, are collected generous selections from his prescient, unflinching books on the problem of civilization and the path to true resistance. In the acclaimed *A Language Older Than Words*, Jensen dissects his own abusive childhood to examine the pathology of Western culture and shares with us the power and beauty of an alliance with the natural world. He continues to use the lens of his own experience as well as the wisdom of philosophers, activists, and teachers to expose oppression and call us to action. In his other early works, *Listening to the Land*, *A Culture of Make Believe*, *Strangely Like War*, and *Walking on Water*, we see his analysis deepen when he asks us to accept that the only moral response to biocide is resistance. In the two-volume *Endgame*, a truth he explores further in *Thought to Exist in the Wild*, *What We Leave Behind*, the graphic novel *As the World Burns*, and in his two novels *Songs of the Dead* and *Lives Less Valuable*. And in *Dreams*, Jensen's latest work, he leads us still further toward his vision for a healed planet, freeing us to see beyond the limits of our present culture to a future luminous with meaning.
