Objectivity & Diversity Sandra Harding,2015-05-18

Worries about scientific objectivity seem never ending Social critics and philosophers of science have argued that invocations of objectivity are often little more than attempts to boost the status of a claim while calls for value neutrality may be used to suppress otherwise valid dissenting positions Objectivity is used sometimes to advance democratic agendas at other times to block them sometimes for increasing the growth of knowledge at others to resist it Sandra Harding is not ready to throw out objectivity quite yet For all of its problems she contends that objectivity is too powerful a concept simply to abandon In Objectivity and Diversity Harding calls for a science that is both more epistemically adequate and socially just a science that would ask How are the lives of the most economically and politically vulnerable groups affected by a particular piece of research Do they have a say in whether and how the research is done Should empirically reliable systems of indigenous knowledge count as real science Ultimately Harding argues for a shift from the ideal of a neutral disinterested science to one that prizes fairness and responsibility

**Mitochondria: Hubs of Cellular Signaling, Energetics and Redox Balance** Miguel A. Aon, Amadou K. S. Camara, 2017-08-11 Poised at the convergence of most catabolic and anabolic pathways mitochondria are the center of heterotrophic aerobic life representing a hub in the overall metabolic network of cells The energetic functions performed by mitochondria face the unavoidable redox hurdle of handling huge amounts of oxygen while keeping its own as well as the cellular redox environment under control Reactive oxygen species ROS are produced in the respiratory chain as a result of the energy supplying function of mitochondria

Originally considered an unavoidable by product of oxidative phosphorylation ROS have become crucial signaling molecules when their levels are kept within physiological range This occurs when their production and scavenging are balanced within mitochondria and cells Mitochondria generated hydrogen peroxide can act as a signaling molecule within mitochondria or in the cytoplasm affecting multiple networks that control for example cell cycle stress response cell migration and adhesion energy metabolism redox balance cell contraction and ion channels However under pathophysiological conditions excessive ROS levels can happen due to either overproduction overwhelming of antioxidant defenses or both Under oxidative stress detrimental effects of ROS include oxidation of protein lipids and nucleic acids mitochondrial depolarization and calcium overload and cell wide oscillations mediated by ROS induced ROS release mechanisms Mitochondrial dysfunction is central in the pathogenesis of numerous human maladies including cardiomyopathies and neurodegeneration Diseases characterized by altered nutrient metabolism such as diabetes and cancer exhibit elevated ROS levels These may contribute to pathogenesis by increasing DNA mutation affecting regulatory signaling and transcription and promoting inflammation Under metabolic stress several ionic channels present in the inner and outer mitochondrial membranes can have pro life and death effects In the present E book based on the Frontiers Research Topic entitled Mitochondria Hubs of cellular signaling energetics and redox balance we address one of the fundamental questions that the field of ROS biology faces today how do mitochondria accomplish a reliable energy provision and at the same time keep ROS levels within physiological non harming limits but crucial for cellular signaling function Additionally and within the perspective of mitochondria as signaling energetic hubs in the extensive cellular metabolic network we ask how can their collective dynamics scale from the subcellular to the cellular tissue and organ levels to affect function in health and disease
