Wind Wizard Siobhan Roberts,2012-11-25 How the father of wind engineering helped make the world s most amazing buildings and bridges possible With Wind Wizard Siobhan Roberts brings us the story of Alan Davenport 1932 2009 the father of modern wind engineering who investigated how wind navigates the obstacle course of the earth s natural and built environments and how when not properly heeded wind causes buildings and bridges to teeter unduly sway with abandon and even collapse In 1964 Davenport received a confidential telephone call from two engineers requesting tests on a pair of towers that promised to be the tallest in the world His resulting wind studies on New York s World Trade Center advanced the art and science of wind engineering with one pioneering innovation after another Establishing the first dedicated boundary layer wind tunnel laboratory for civil engineering structures Davenport enabled the study of the atmospheric region from the earth s surface to three thousand feet where the air churns with turbulent eddies the average wind speed increasing with height The boundary layer wind tunnel mimics these windy marbled striations in order to test models of

buildings and bridges that inevitably face the wind when built Over the years Davenport s revolutionary lab investigated and improved the wind worthiness of the world s greatest structures including the Sears Tower the John Hancock Tower Shanghai s World Financial Center the CN Tower the iconic Golden Gate Bridge the Bronx Whitestone Bridge the Sunshine Skyway and the proposed crossing for the Strait of Messina linking Sicily with mainland Italy Chronicling Davenport s innovations by analyzing select projects this popular science book gives an illuminating behind the scenes view into the practice of wind engineering and insight into Davenport s steadfast belief that there is neither a structure too tall nor too long as long as it is supported by sound wind science Some images inside the book are unavailable due to digital copyright restrictions

Human Security and Natural Disasters Christopher Hobson,Paul Bacon,Robin Cameron,2014-03-26 Human security is an approach that rejects the traditional prioritization of state security and instead identifies the individual as the primary referent of security It offers a way of broadening our perspective and recognizing that the most pressing threats to individuals do not come from interstate war but from the emergencies that affect people every day such as famine disease displacement civil conflict and environmental degradation Human security is about people living their lives with dignity being free from fear and want To date there has been a strong tendency to focus on insecurity caused by civil conflict with less attention on issues to do with environmental security This volume addresses the threat posed by natural disasters which represent an increasingly major human security threat to people everywhere In looking at natural disasters this book also refines the human security approach It does so through developing its previously unexplored interdisciplinary potential This volume explicitly seeks to bring the human security approach into conversation with contributions from a range of disciplines development disaster sociology gender studies international law international relations philosophy and public health Collectively these scholars unpack the human element of natural disasters In doing so an emphasis is placed on how pre existing vulnerabilities can be gravely worsened as well as the interconnected nature of human security threats The book presents a variety of case studies that include the Indian Ocean tsunami Hurricane Katrina the 2010 Haiti earthquake and the 2011 triple disasters in Japan
