Currently the research field of electrochemical cells is a hotspot for scientists and engineers working in advanced frontlines of micro nano and bio technologies especially for improving our systems of energy generation and conversation health care and environmental protection With the efforts from the authors and readers the theoretical and practical development will continue to be advanced and expanded      Electrochemical Cell Assembled in Discharged State, 1976

A secondary electrochemical cell is assembled in a completely discharged state within a sealed containment As assembled the cell includes a positive electrode separated from a negative electrode by a molten salt electrolyte The positive electrode is contained within a porous structure permitting passage of molten electrolyte and includes one or more layers of a metallic mesh e g iron impregnated with an intimate mixture of lithium sulfide and the electrolyte The negative electrode is a porous plaque of aluminum metal Prior to using the cell an electrical charge forms lithium aluminum alloy within the negative electrode and metal sulfide within the positive electrode      **Electrochemical Cell Design** Ralph E.
