Electromagnetic Nondestructive Evaluation (VII) Gerd Dobmann, 2006 The aim of this selection of papers is to bring together researchers working very deep in the basics of electromagnetic NDT on one hand and industrialist discussing their practical problems on the other hand The papers cover

topics as Microwave applications and Material Characterization General Eddy Current Inspection Tasks Novel Techniques and Sensors Magnetic Flux leakage Inspection Steam Generator Eddy Current Inspection Tasks and Material Characterization Especially Novel Techniques and Sensors and Material Characterization are discussed on multiple papers This publication gives a good overview of the many scientific problems in this area but also explains the actual challenges for the scientific technical community like problems with in line inspection of pipelines or the enhancing of the inspection performance in steam generator tubes inspection in the nuclear field The material is important for scientists and engineers working in the field of electromagnetic non destructive testing in defect detection and sizing as well as in material characterization

Electromagnetic Metrology, 1975 Electromagnetic Modelling and Measurements for Analysis and Synthesis Problems B. de Neumann, 2012-12-06 In this volume is presented the proceedings of a NATO Advanced Study Institute ASI on the theme of Electromagnetic Modelling and Measurements for Analysis and Synthesis Problems The ASI was held at 11 Ciocco Castelvechio Pascoli Tuscany Italy August 10th 21st 1987 It has been my good fortune to act as co director of two of Jozef s previous ASIs and so I am well acquainted with the JKS format for ASIs As participants will realise I did not attend this ASI and so I only have a partial appreciation of the programme In particular it has not been possible to include transcripts of any panel discussions which may have taken place Readers may recall that such transcripts have formed a most interesting and useful part of previous ASI proceedings edited by Jozef Skwirzynski and helped to convey the spirit of the meetings Unfortunately it has proved impossible to locate the tapes despite the best efforts of Jozef s assistant Barry Stuart A further difficulty has arisen through the untimely death of Jozef s former deputy and colleague at GEC Research Ed Pacello who assisted Jozef with the organisation of the precursor of this ASI The following is taken from original material relating to the aims of the Advanced Study Institute

PURPOSE OF THE INSTITUTE This Institute is concerned with computer modelling and with experimental measurements as two complementary tools for both analysis and synthesis of electromagnetics EM infra red IR and optical problems

Numerical Analysis of Electromagnetic Fields Pei-bai Zhou, 2012-12-06 Numerical methods for solving boundary value problems have developed rapidly Knowledge of these methods is important both for engineers and scientists There are many books published that deal with various approximate methods such as the finite element method the boundary element method and so on However there is no textbook that includes all of these methods This book is intended to fill this gap The book is designed to be suitable for graduate students in engineering science for senior undergraduate students as well as for scientists and engineers who are interested in electromagnetic fields Objective Numerical calculation is the combination of mathematical methods and field theory A great number of mathematical concepts principles and techniques are discussed and many computational techniques are considered in dealing with practical problems The purpose of this book is to provide students with a solid background in numerical analysis of the field problems The book emphasizes the basic theories and universal principles of different

numerical methods and describes why and how different methods work Readers will then understand any methods which have not been introduced and will be able to develop their own new methods Organization Many of the most important numerical methods are covered in this book All of these are discussed and compared with each other so that the reader has a clear picture of their particular advantage disadvantage and the relation between each of them The book is divided into four parts and twelve chapters
