Chemical Induction of Cancer Joseph C. Arcos, Mary F. Argus, Yin-tak Woo, 2012-12-06 In the approach to the analysis of disease including of course cancer two major thrusts may be distinguished These may be referred to in shorthand as agents and processes the causative agents chemical microbial physical environmental and psychosocial and the organismic processes initiated and furthered by the agents culminating in observable pathology at the macromolecular cytological histological organ function locomotor and behavioral levels The past 25 years since the appearance of the first volume of the predecessor series 1 authored by the Editors of this present volume have seen an impressive number of studies on chemicals and other agents as etiologic factors in the induction of cancer The major emphasis has been on the discovery of many chemical carcinogens of widely different structures their metabolism by various tissues and cells and in turn their molecular biochemical effects on the cells This rapidly expanded body of information as effectively covered in the predecessor volumes is an excellent entree to the second half of the overall problem of chemical carcinogenesis the processes The active agents trigger a large array of molecular biochemical alterations to which the target cells target tissues and target organisms respond in many select and common ways This second major aspect of the induction of cancer by chemicals and by other agents the sequence of cellular and tissue changes clearly relevant to cancer remains
