 The C language provides no built in facilities for performing such common operations as input output memory management string manipulation and the like
 Instead these facilities are defined in a standard library which you compile and link with your programs
 The GNU C Library described in this document defines all of the library functions that are specified by the ISO C standard as well as additional features specific to POSIX and other derivatives of the Unix operating system and extensions specific to GNU systems
 The purpose of this manual is to explain how to use the facilities of the GNU C Library
 We have mentioned which features belong to which standards to help you identify things that are potentially non portable to other systems
 But the emphasis in this manual is not on strict portability
