

Isotopes and Radioactivity

Knowledge

- 1) Define radioactive decay

Comprehension

- 2) The half-life for an isotope is 300. The second half-life is 250, and the third is 125. What will the fourth half-life be?

Application

- 3) Illustrate a picture showing radioactive decay before and after

Analysis

- 4) Compare and contrast synthetic and naturally occurring elements

Synthesis

- 5) Imagine you synthesized an element in a lab. What would you name it? Why?

New Coordinated Science: Physics Students' Book Stephen Pople, 2001-07-05 New Coordinated Science is our most popular upper secondary course and is widely regarded by teachers as the best available This third edition has been completely updated for the new specifications These new editions maintain the same clear presentation and straightforward approach that has made New Coordinated Science so enduringly popular Information is provided in manageable chunks and is reinforced by stimulating questions and activities that encourage students to consider the practical application of science to everyday life These new editions provide a new focus on your Higher Tier GCSE students The breadth and depth of the new material is enough to stretch and stimulate even the highest achievers New Coordinated Science is also recommended by University of Cambridge International Examinations for IGCSE Physics **Astrophysics with Radioactive Isotopes** Roland Diehl, Dieter H. Hartmann, Nikos Prantzos, 2018-10-11 Dealing with astrophysics derived from the radiation emitted by radioactive atomic nuclei this book describes the different methods used to measure cosmic radio isotopes It demonstrates how this astronomical window has contributed to the understanding of the sources and the chemical evolution of cosmic gas Reference materials and explanations are included for students in advanced stages of their education Nuclear reactions in different sites across the universe lead to the production of stable and unstable nuclei Their abundances can be measured through different methods allowing to study the various nuclear processes taking place in cosmic environments Nucleosynthesis is the cosmic formation of new nuclear species starting from hydrogen and helium resulting from the big bang origins Stars create and eject synthesized nuclei during their evolution and explosions Incorporation of the new interstellar composition into next generation stars characterises the compositional chemical evolution of cosmic gas in and between galaxies Radioactive species have unique messages about how this occurs Since the first Edition of this book published in 2011 with the title Astronomy with Radioactivities long awaited new direct observations of supernova radioactivity have been made and are now addressed in two updated chapters dealing with supernovae In this second Edition the advances of recent years beyond one dimensional treatments of stellar structure and stellar explosions towards 3

dimensional models have been included and led to significant re writings in Chapters 3 5 The sections on the Solar System origins have been re written to account for new insights into the evolution of giant molecular clouds The chapter on diffuse radioactivities now also includes material measurements of radioactivities in the current solar system and their interpretations for recent nucleosynthesis activity in our Galaxy Significant new results on gamma rays from positron annihilations have been accounted for in that chapter and led to new links with nucleosynthesis sources as well as interstellar transport processes A new chapter now provides a description of interstellar processes often called chemical evolution thus linking the creation of new nuclei to their abundance observations in gas and stars The experimental instrumental chapters on nuclear reaction measurements on gamma ray telescopes and pre solar grain laboratories have been updated Moreover new windows of astronomy that have been opened up in recent years have been included in the discussions of the multi messenger approach that broadens the basis for astrophysical insights
