Htri Training Manual:

Process Engineering Michael Kleiber, 2023-11-20 Reading the book you can feel the long practical experience of the author. The text is easy to read even where concepts can be complex. The strong theoretical background of the author is well known from other publications. In this book however the topics are presented on a level that every engineer and scientist in the chemical industry and process industry should know and can understand. This book would have been very helpful at the beginning of my career to close the addressed gap. Therefore I can strongly recommend it not only to all students close to their degree but also to engineers and scientists just starting their industrial career in the related industrial sectors that are subsumed under the term process industry: chemical or petrochemical industry, pharmaceutical industry, food industry, biochemical industry, environmental technology etc. The book is like an investment. Doing a better job and getting a better job evaluation might pay for the book. Prof. Dr. Ing. Claus Fleischer, Frankfurt University of Applied Sciences, Process Engineering is based on almost 30 years of practical experience of the author in process simulation design and development. The book is a missing link between students and practitioners. The author has coached many graduates in their first months and knows what the typical questions are. Coming from the university, graduates often do not know which relevance their knowledge has and how to apply it in real life, whereas established practitioners often stick to the narrow way of their experience, forgetting that science continuously makes progress. There is a gap to be bridged. From his own professional experience, the author covers many topics of the process engineering business, but three guest contributions are a valuable supplement to the content of the third edition. Already in the 2nd edition, Verena Haas from BASF SE wrote an excellent chapter on dynamic process simulation. For the new 3rd edition, G. K. Adali and Michael Benje added two chapters on digitalization and patents respectively. Preparing the reader for the everyday business: The Chemical Engineer, 1989; *Heat Exchangers* E. A. D. Saunders, 1988. A description of the design, construction, and applications of unfired heat exchangers used in the process industries, giving guidance on the merits and limitations of the different types, details of their materials of construction, and cost, and numerous examples of design calculations. Government Reports, Announcements & Index, 1986-06; **Energy Research Abstracts**, 1982; **Data Bases and Data Base Systems Related to NASA's Aerospace Program**, 1983; **Process Industries Canada**, 1985; **Petrominer**, 2005; Proceedings of the National Academy of Sciences of the United States of America, National Academy of Sciences (U.S.), 1992. The Proceedings of the National Academy of Sciences (PNAS) publishes research reports, commentaries, reviews, colloquium papers, and actions of the Academy. PNAS is a multidisciplinary journal that covers the biological, physical, and social sciences. **Scientific and Technical Aerospace Reports**, 1985.
