use rice straw productively and avoid open burning Rice straw is a useful resource that can be used in situ to maintain soil fertility as well as ex situ to produce value added products including energy However a key challenge in using crop residues including rice straw is to mobilize it in systematically This report presents a model crop residue value chain that can support the collection transport storage of rice straw which can enable productive uses of rice straw Moreover it estimates the quantity of rice straw produced in each district in Punjab and further estimates the investment needed in developing a crop residue supply chain in the state Finally it also undertakes a techno economic assessment of energy technologies to identify the most profitable way to use rice straw to produce sustainable energy
