Layered Place Value Cards:

Mathematics Matters in Education Yeping Li, W. James Lewis, James J. Madden, 2017-10-03 This book is inspired by Roger E. Howe's contributions to the international communities of mathematics and mathematics education. Renowned for his research contributions in the fields of representation theory, automorphic forms, harmonic analysis, and invariant theory, Dr. Howe has also fundamentally deepened our understanding of the mathematics taught in the early school grades and has challenged and stimulated mathematicians and mathematics educators to work together to examine this part of the mathematical universe more critically and in imaginative new ways. This volume will help summarize and highlight Howe's contributions to several topic areas in mathematics education, demonstrating the possibility and importance of engaging mathematicians in high impact research in mathematics education and showcasing the importance of cross-disciplinary collaboration and exchange.

The Mathematical Education of Teachers II Conference Board of the Mathematical Sciences, 2012 This report is a resource for those who teach mathematics and statistics to PreK-12 mathematics teachers, both future teachers and those who already teach in our nation's schools. The report makes recommendations for the mathematics that teachers should know and how they should come to know that mathematics. It urges greater involvement of mathematicians and statisticians in teacher education so that the nation's mathematics teachers have the knowledge, skills, and dispositions needed to provide students with a mathematics education that ensures high school graduates are college and career ready as envisioned by the Common Core State Standards. This report draws on the experience and knowledge of the past decade to update the 2001 Mathematical Education of Teachers report's recommendations for the mathematical preparation of teachers at all grade levels: elementary, middle, and high school. Address the professional development of teachers of mathematics. Discuss the mathematical knowledge needed by teachers at different grade levels and by others who teach mathematics, such as elementary mathematics specialists, special education teachers, and early childhood educators. Each of the MET II writers is a mathematician, statistician, or mathematics educator with substantial expertise and experience in mathematics education. Among them are principal investigators for Math Science Partnerships, as well as past presidents and chairs of the American Statistical Association, Association of Mathematics Teacher Educators, Association of State Supervisors of Mathematics, Conference Board of the Mathematical Sciences, and National Council of Teachers of Mathematics. The audience for this report includes all who teach mathematics to teachers, mathematicians, statisticians, and mathematics educators, and all who are responsible for the mathematical education of teachers: department chairs, educational administrators, and policy makers at the national, state, school district, and collegiate levels. Supporting Numeracy Rita Headington, 2013-12-19 First Published in 2001 Starting with references to the Cockcroft Report of 1982 and the National Strategy this study defines numeracy as mathematics in action and outlines its importance in everyday life Using and applying mathematics within the early learning setting means children are also taught to solve problems to communicate their ideas and develop their reasoning skills Teaching Assistants provide the most effective support in mathematics when working in partnership with the teacher by sharing goals To do this effectively it is important for assistants to understand how mathematics learning takes place within the early years setting and to know how and when to use mathematics language and equipment The purpose of this book is to provide such understanding and knowledge

Constructing Number Anderson Norton, Martha W. Alibali, 2018-12-17 The book synergizes research on number across two disciplines mathematics education and psychology The underlying problem the book addresses is how the brain constructs number The opening chapter frames the problem in terms of children's activity including mental and physical actions Subsequent chapters are organized into sections that address specific domains of number natural numbers fractions and integers Chapters within each section address ways that children build upon biological primitives e.g. subitizing and prior constructs e.g. counting sequences to construct number The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior

researchers as well as between psychologists and mathematics educators The final chapter brings this work together around the framework of children s activity and additional themes that arise in the collective work The book is aimed to appeal to mathematics educators mathematics teacher educators mathematics education researchers educational psychologists cognitive psychologists and developmental psychologists

Mathematics Curriculum in School Education Yeping Li, Glenda Lappan, 2013-11-19 Mathematics curriculum which is often a focus in education reforms has not received extensive research attention until recently Ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education This book provides a unique international perspective on diverse curriculum issues and practices in different education systems offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts The book is organized to help readers learn not only from reading individual chapters but also from reading across chapters and sections to explore broader themes including Identifying what is important in mathematics for teaching and learning in different education systems Understanding mathematics curriculum and its changes that are valued over time in different education systems Identifying and analyzing effective curriculum practices Probing effective infrastructure for curriculum development and implementation Mathematics Curriculum in School Education brings new insights into curriculum policies and practices to the international community of mathematics education with 29 chapters and four section prefaces contributed by 56 scholars from 14 different education systems This rich collection is indispensable reading for mathematics educators researchers curriculum developers and graduate students interested in learning about recent curriculum development research and practices in different education systems It will help readers to reflect on curriculum policies and practices in their own education systems and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning
