available about encryption start out with statistics and reports on the costs of data loss and quickly get bogged down in cryptographic theory and jargon followed by attempts to comprehensively list all the latest and greatest tools and techniques After step by step walkthroughs of the download and install process there s precious little room left for what most readers really want how to encrypt a thumb drive or email message or digitally sign a data file There are terabytes of content that explain how cryptography works why it s important and all the different pieces of software that can be used to do it there is precious little content available that couples concrete threats to data with explicit responses to those threats This title fills that niche By reading this title readers will be provided with a step by step hands on guide that includes Simple descriptions of actual threat scenarios Simple step by step instructions for securing data How to use open source time proven and peer reviewed cryptographic software Easy to follow tips for safer computing Unbiased and platform independent coverage of encryption tools and techniques Simple descriptions of actual threat scenarios Simple step by step instructions for securing data How to use open source time proven and peer reviewed cryptographic software Easy to follow tips for safer computing Unbiased and platform independent coverage of encryption tools and techniques *Browser-based Manual Encryption* Yuanzheng Song,2014 Billions of web based email and chat messages are sent over the Internet every day However very few service providers support end to end privacy protection While providing security for these messages is technically feasible usability remains a challenge in this field Recent research attempts to hide security details like key management and encryption in order to make the system more usable However usability studies demonstrated that hiding these details may confuse the user and contribute to mistakes e g sending out an email in plaintext when the user thought it would be encrypted In an effort to increase trust and eliminate mistakes this thesis presents the design of a browser based manual encryption mechanism that supports automatic key management and manual encryption It also describes the Message Protector MP prototype An evaluations of MP is presented based on a user study conducted on the campus of BYU
