Ever increasing interest in oceanography and marine biology and their relevance to global environmental issues create a demand for authoritative reviews summarizing the results of recent research. *Oceanography and Marine Biology: An Annual Review* has catered to this demand since its founding by the late Harold Barnes more than 50 years ago. Its objectives are to consider annually the basic areas of marine research, returning to them when appropriate in future volumes to deal with subjects of special and topical importance and to add new subjects as they arise. The favourable reception and complimentary reviews accorded to all the volumes shows that the series is fulfilling a very real need. Volume 55 follows closely the objectives and style of the earlier volumes, continuing to regard the marine sciences with all their various aspects as a unity. Physical, chemical and biological aspects of marine science are dealt with by experts actively engaged in these fields and every chapter is peer reviewed by other experts working actively in the specific areas of interest. Chapters 3, 4, 5 and 6 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license.

Wildlife Review, 1995. *Lipid Metabolism and human diseases*. Da-wei Zhang, Xian-Cheng Jiang, Kai Yin, 2023-09-28. Lipids such as cholesterol, phospholipids, triglycerides and free fatty acids play various essential physiological roles. Dysregulation of lipid metabolism causes dyslipidemia, which is a critical factor in the development of various human diseases such as cardiovascular disease, diabetes, non-alcoholic fatty liver disease, Alzheimer's disease and Niemann-Pick disease. Therefore, lipid homeostasis in humans is strictly regulated by a well-balanced mechanism of intestinal uptake, endogenous synthesis and metabolism and transport in lipoprotein particles and excretion. The human body evolves multiple mechanisms to maintain lipid homeostasis such as low-density lipoprotein receptor-mediated clearance of circulating low-density lipoprotein cholesterol, phospholipid transfer protein-mediated transfer of phospholipids from apoB-containing triglyceride-rich lipoprotein to high-density lipoprotein, etc.

Pesticides Documentation Bulletin, 1967. **International Review of Cytology**, 1995-05-30. *International Review of Cytology* presents current advances and comprehensive reviews in cell biology, both plant and animal. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

The Plasma Proteins V5. Frank Putnam, 2012-12-02. *The Plasma Proteins: Structure, Function and Genetic Control*, Second Edition, Volume V explores the contribution of molecular biology and gene cloning approaches to the advancement of plasma protein structure, function and genomic organization studies. This volume is composed of five chapters and begins with a discussion on the DNA sequences and chromosomal location of plasma protein genes, specifically the cloning and sequencing of immunoglobulin genes. These topics are followed by a discussion on the advances in relation to discovered genetic variants present either as normal phenotypes or in dyslipoproteinemic states associated with cardiovascular disease. A chapter highlights the application of molecular biology techniques to the study of

gene structure and the translational and maturation steps of every major plasma apolipoprotein Another chapter emphasizes the unique features of protein structure and the conformational changes that characterize the assembly of macromolecular complexes in plasma and on cell surfaces The concluding chapter provides a comprehensive review of the integration of molecular biology physiology and pathology of plasma proteins and their response in inflammation This book will be of great value to molecular biologists physiologists pathologists and clinicians Catalog of Copyright Entries.
