The Information Superhighway and Private Households Walter Brenner, Lutz Kolbe, 2012-12-06. Wolfgang Glatthaar. International Business Machines IBM Gennany. The rapid developments in information technology (IT) will continue through the coming years. New application areas will be added. Whereas the use of information technology in the past decade has been concentrated primarily on business and public administration, in the future the suppliers of information technology will develop an increasing number of applications for the private household. See Fig. 1. Traditional perspective: New perspective: IT solutions for the company; IT solutions for the private household. Fig. 1. New perspective on information technology. This development has already generated considerable market dynamics. Latest forecasts for the USA suggest that by 1996 at the latest, the private household will present greater sales potential for home computers than business and public administration.

VI Preface. Up to now, the use of information technology in the private household has not been regarded as highly significant by either business or science, even though PCs have become widespread in the private sphere. In the ESPRIT framework, there have been individual projects dealing with home networks, and in a number of Asian and European countries as well as America, experiments with interactive

television are taking place Internet and commercial online services are experiencing rapid growth This application area for information technology in the private household which is generating increasing business attention must also be the subject of appropriate research activities
