Advances in the Biology and Medicine of Pain Alexandra Latini, Michael Costigan, 2022-02-16 **PRICAI 2010: Trends in Artificial Intelligence** Byoung-Tak Zhang, 2010-08-24 Annotation This volume constitutes the refereed proceedings of the 11th Pacific Rim Conference on Artificial Intelligence PRICAI 2010 held in Daegu Korea in August September 2010 The 48 revised full papers presented together with 21 short papers in this volume were carefully reviewed and selected from 191 submissions The volume concentrates on AI theories technologies and their applications in the areas of social and economic importance for countries in the Pacific Rim **Microsoft SharePoint Server 2007 Bible** Wynne Leon, Wayne Tynes, Simeon Cathey, 2007-06-12 Provides information on using Microsoft SharePoint to create Office compatible Web sites intranets and portals and manage business records *Masked Priming* Sachiko Kinoshita, Stephen J. Lupker, 2004-06-02 Masked priming has a short and somewhat controversial history When used as a tool to study whether semantic processing can occur in the absence of conscious awareness considerable debate followed mainly about whether masked priming truly tapped unconscious processes For research into other components of visual word processing however in particular orthographic phonological and morphological a general consensus about the evidence provided by masked priming results has emerged This book contains thirteen original chapters in which these three components of visual word processing are examined using the masked priming procedure The chapters showcase the advantages of masked priming as an alternative to more standard methods of studying language processing that require comparisons of matched items Based on a recent conference this book offers up to date research findings and would be valuable to researchers and students of word recognition psycholinguistics or reading **Informatics in Schools: Contributing to 21st Century Education** Ivan Kalas, Roland T. Mittermeir, 2011-10-12 This book constitutes the refereed proceedings of the 5th International Conference on Informatics in Schools Situation Evolution and Perspectives ISSEP 2011 held in Bratislava Slovakia in October 2011 The 20 revised full papers presented were carefully reviewed and selected from 69 submissions A broad variety of topics related to teaching informatics in schools is addressed ranging from national experience reports to paedagogical and methodological issues The papers are organized in topical sections on informatics education the spectrum of options national perspectives outreach programmes teacher education informatics in primary schools advanced concepts of informatics in schools as well as competitions and exams The Publishers Weekly, 1917 **Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes** Pierluigi Zoccolotti, Peter F. de Jong, Donatella Spinelli, 2016-06-24 Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito

temporal areas a finding common to both transparent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic comorbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia

Proceedings of the Twentieth Annual Conference of the Cognitive Science Society Morton Ann

Gernsbacher, Sharon J. Derry, 2022-05-16 This volume features the complete text of the material presented at the Twentieth Annual Conference of the Cognitive Science Society As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science This volume contains papers posters and summaries of symposia presented at the leading conference that brings cognitive scientists together to discuss issues of theoretical and applied concern Submitted presentations are represented in these proceedings as long papers those presented as spoken presentations and full posters at the conference and short papers those presented as abstract posters by members of the Cognitive Science Society

Fluency in Reading

Zvia Breznitz, 2006-08-15 This is the first book to examine in depth the crucial role of the speed of information processing in the brain in determining reading fluency in both normal and dyslexic readers Part I explains fluency in reading from both traditional and modern perspectives Fluency has historically been viewed as the outcome of other reading related factors and has often been seen as a convenient measure of reading skills This book however argues that fluency has a strong impact on other aspects of reading and plays a central role in the entire reading process Part II deals with the determinants of reading fluency Chief among these is the speed of information processing in the brain Using both behavioral and electrophysiological evidence the book systematically examines the features of processing speed in the various brain systems involved in reading visual orthographic auditory phonological and semantic and shows how speed of processing affects fluency in reading Part III deals with the complex issues of cross modal integration and specifically with the need for effective synchronization of the brain processes involved in reading It puts forward the Synchronization Hypothesis and discusses the role of the Asynchrony Phenomenon as a major factor in dyslexia Finally it summarizes research on manipulating reading rate by means of the Acceleration method providing evidence for a possible intervention aimed at reducing Asynchrony Key features of this outstanding new book include Expanded View of Fluency Reading fluency is seen as both a dependent and an independent Variable Currently available books focus on reading rate solely as the outcome of other factors whereas this volume stresses that it is both an outcome and a cause Information Processing Focus Fluency itself is determined to a large extent by a more general factor namely speed of processing in the brain The book presents wide ranging evidence for individual differences in speed of processing across many subpopulations Brain Synchronization Focus The book posits a new theory arguing that effective reading requires synchronization of the different brain systems visual orthographic auditory phonological and semantic Research Based Interventions Interventions to enhance fluency and thereby reading skills in general are presented in detail Author Expertise Zvia Breznitz is Head of the Department of Learning Disabilities and Director of the Laboratory for Neurocognitive Research at Haifa University in Israel where she has been researching this topic for over a decade This book is appropriate for researchers and advanced students in reading dyslexia learning disabilities cognitive psychology and neuropsychology

Artificial Intelligence for Education Mario Allegra, Manuel Gentile, Giuseppe Città, Frank Dignum, Iza Marfisi-Schottman, 2023-11-27 What learning teaching and education will be in the next future is an open question Nevertheless believing that an increasing prevalence of AI may not influence the education field seems objectively unlikely In recent years the new renaissance of AI has stimulated discussion on how advances in AI can influence the educational sector and the future educational policies and the impact of AI on Technology Enhanced Learning TEL On the other side the attention of the education sector in artificial intelligence is

complemented by the consideration that since the early days of AI researchers have shown for the education sector which has often seen education as one of the preferred application areas The interaction between the AI and TEL research fields led to the investigation of how the advance in AI could support the development of flexible inclusive personalized engaging and effective learning tools Besides research in this area could be a powerful tool to open the learning black box by providing a deeper understanding of how learning occurs The proposed Research Topic aims to gather contributions that provide a comprehensive picture of how AI is changing educational practices and how the key stakeholders in the educational community i e students teachers faculty and families perceive this ongoing change Relevant topics include but are not limited to AI applications in real world educational settings Intelligent Tutoring Systems Adaptive learning environments Learning design and AI Students profiling definition of the student model and ethical implications Intelligent techniques for objective and integrated students evaluation in TEL Teachers competencies for effective integration of AI into Education Teachers perceptions of AI prejudices and attitudes The role of cognitive architectures in Education Serious games and AI Social robotics in Education

NIMHANS Journal ,1997 **Brain-Computer Interfacing** Rajesh P. N. Rao,2013-09-30 The idea of interfacing minds with machines has long captured the human imagination Recent advances in neuroscience and engineering are making this a reality opening the door to restoration and augmentation of human physical and mental capabilities Medical applications such as cochlear implants for the deaf and neurally controlled prosthetic limbs for the paralyzed are becoming almost commonplace Brain computer interfaces BCIs are also increasingly being used in security lie detection alertness monitoring telepresence gaming education art and human augmentation This introduction to the field is designed as a textbook for upper level undergraduate and first year graduate courses in neural engineering or brain computer interfacing for students from a wide range of disciplines It can also be used for self study and as a reference by neuroscientists computer scientists engineers and medical practitioners Key features include questions and exercises in each chapter and a supporting website

Progress in Episodic Memory Research Ekrem Dere,Armin Zlomuzica,Angelica Staniloiu,Hans J. Markowitsch,2016-05-25 Episodic memory refers to the ability to remember personal experiences in terms of what happened and where and when it happened Humans are also able to remember the specific perceptions emotions and thoughts they had during a particular experience This highly sophisticated and unique memory system is extremely sensitive to cerebral aging neurodegenerative and neuropsychiatric diseases The field of episodic memory research is a continuously expanding and fascinating area that unites a broad spectrum of scientists who represent a variety of research disciplines including neurobiology medicine psychology and philosophy Nevertheless important questions still remain to be addressed This research topic on the Progress in Episodic Memory Research covers past and current directions in research dedicated to the neurobiology neuropathology development measurement and treatment of episodic memory

Nam,Anton Nijholt,Fabien Lotte,2018-01-09 Brain Computer Interfaces Handbook Technological and Theoretical Advances provides a tutorial and an overview of the rich and multi faceted world of Brain Computer Interfaces BCIs The authors supply readers with a contemporary presentation of fundamentals theories and diverse applications of BCI creating a valuable resource for anyone involved with the improvement of people s lives by replacing restoring improving supplementing or enhancing natural output from the central nervous system It is a useful guide for readers interested in understanding how neural bases for cognitive and sensory functions such as seeing hearing and remembering relate to real world technologies More precisely this handbook details clinical therapeutic and human computer interfaces applications of BCI and various aspects of human cognition and behavior such as perception affect and action It overviews the different methods and techniques used in acquiring and pre processing brain signals extracting features and classifying users mental states and intentions Various theories models and empirical findings regarding the ways in which the human brain interfaces with external systems and environments using BCI are also explored The handbook concludes by engaging ethical considerations open questions and challenges that continue to face brain computer interface research Features an in depth look at the different methods and techniques used in acquiring and pre processing brain signals extracting features and classifying the

user's intention Covers various theories models and empirical findings regarding ways in which the human brain can interface with the systems or external environments Presents applications of BCI technology to understand various aspects of human cognition and behavior such as perception affect action and more Includes clinical trials and individual case studies of the experimental therapeutic applications of BCI Provides human factors and human computer interface concerns in the design development and evaluation of BCIs Overall this handbook provides a synopsis of key technological and theoretical advances that are directly applicable to brain computer interfacing technologies and can be readily understood and applied by individuals with no formal training in BCI research and development

Current perspectives on the mechanisms of auditory hallucinations in clinical and non-clinical populations Johanna C. Badcock, Frank Larøi, Paul Allen, Kelly M.

Diederer, 2014-03-07 There has been a recent surge of interest in auditory hallucinations AH in schizophrenia compared to those experienced by non clinical i.e. healthy individuals This interest stems in no small part from a keen awareness of the fact that progress in developing more effective treatments for AH in psychosis has been seriously hampered by our limited understanding of the cognitive and biological mechanisms involved The prevailing notion that AH in clinical and non clinical populations share the same features and underlying mechanisms the continuum hypothesis has been seriously challenged by a growing list of differences as well as similarities between these groups At the phenomenological level this is exemplified in the highly negative content of AH in patients and the markedly earlier age of onset of AH in non patients Similarly several recent studies point to significant differences in cognition language lateralization and possibly dopamine function between these groups These findings have important implications for the design of future studies and raise considerable doubt about the adequacy of modelling the functional mechanisms of clinical AH on the basis of non clinical populations In short the time seems ripe to re evaluate the continuum hypothesis and provide a forum to present alternative perspectives on the functional pathways leading to AH in clinical and non clinical groups Such a forum is also timely in view of the renewed interest in AH in other non schizophrenic clinical groups again examining similarities and differences between such groups Preliminary studies for instance have shown that AH in certain clinical populations e.g. bipolar disorder borderline personality disorder dissociative disorder share similar phenomenological features with AH in schizophrenia However the implications of such findings are not fully understood and studies have not adequately examined potential differences between AH in these groups The goal of this Frontiers Research Topic therefore is to take the opportunity to bring together research exploring differences and similarities in mechanisms of AH in clinical and non clinical groups and to stimulate the development of new explanatory models which explicitly link the phenomenological characteristics of AH with underlying mechanisms
