20 Points

Name _____ Period _____

INTRODUCTION

Pedigree charts are often constructed to show the inheritance of genetic conditions within a family. Such charts are a great help in determining whether a phenotype is controlled by a dominant, recessive or sex-linked allele.

PART I - Understanding the Pedigree

The symbols of the pedigree are listed on the left. After analyzing the pedigrees, conclusions about the different modes of inheritance can be made. There are three types of inheritance for which pedigrees can be used:

Autosomal Dominant: Each affected individual has an affected parent; there is no skipping of generations. Males and females are equally likely to be affected.

Autosomal Recessive: An affected individual may not have an affected parent. (Both parents could be heterozygous) Males and females are equally likely to be affected.

X-link Recessive: An affected individual may not have an affected parent. Males are more likely to be affected than females. Males also cannot be carriers of the recessive gene. (If they have the X-linked gene, they will show the trait)

PART II – Pedigree Huntington's Disease

1. There are no carriers for Huntington's Disease- you either have it or you don't. What type of complex inheritance is this? _____
2. With this in mind, is Huntington's disease caused by a dominant or recessive trait? _____
3. Which members of the family above are afflicted with Huntington's Disease? _____
4. How many children did individuals I-1 and I-2 have? _____
5. How many girls did II-1 and II-2 have? _____ How many have Huntington's Disease? _____
6. How is individual III-2 and II-4 related? _____ I-2 and III-5? _____
