Digital Mapping Techniques '06, Workshop Proceedings David R. Soller, 2007 **Modelling and Simulation for Autonomous Systems** Jan Hodicky, 2015-08-08 This book constitutes the thoroughly refereed post workshop proceedings of the Second International Workshop on Modelling and Simulation for Autonomous Systems MESAS 2015 held in Prague Czech Republic in April 2015 The 18 revised full papers included in the volume were carefully reviewed and selected from 33 submissions They are organized in the following topical sections state of the art and future of AS MS experimental frameworks for AS methods and algorithms for AS **Service Engineering** Schahram Dustdar, Fei Li, 2010-10-22 Service engineering is increasingly posing challenges to traditional software engineering methodologies including specification modeling architecture and verification just to name a few On the other hand the latest advancements in software engineering are continuously leveraged in Service Engineering research especially in the design and implementation of service oriented systems Several mutual impacts between service engineering and software engineering could be observed in the last decade and many research efforts have been devoted to the field However in spite of the considerable efforts and significant contributions few have attempted to summarize the research results systematically **Towards a Service-Based Internet** Petri Mähönen, Klaus Pohl, Thierry Priol, 2008-12-11 Today it is almost impossible to remember what life was like with no computer no mobile phone and no Internet for accessing information performing transactions or exchanging emails and data New technology is bringing wave after wave of new benefits to daily life organisations are doing business with each other via the Internet people are filing in tax declarations online and booking their next vacation through the Internet In general we are all progressively relying and dependent on software and services running on computers connecting mobile phones and other devices and exchanging information on the Internet People like to shop around and exercise choice So do businesses and public administrations Today they can buy a complete software package that best suits their needs even though they may never use some of the tools it offers or other desirable tools are not available In the future they may no longer have to compromise on choice Alternative approaches like Software as a Service and Computing Resources as a Service are emerging Software is provided on line as a service when and where it is needed and the same for computing resources needed to run software Such an approach allows individuals and organisations to tap into and effectively harness the immense wealth of information knowledge and analytical resources when they need them paying only for what they use Customers are bound to benefit when there is a sufficient choice of services El-Hi Textbooks & Serials in Print, 2005, 2005 *Guide to Advanced Empirical Software Engineering* Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not

only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering d bled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference

Reliability and Probabilistic Safety Assessment in Multi-Unit Nuclear Power Plants Senthil C. Kumar,2023-02-09 Reliability and Probabilistic Safety Assessment in Multi Unit Nuclear Power Plants presents the risk contributions from single and multi unit Nuclear Power Plants to help aggregate the risks that may arise due to applicable hazards and operating states The book combines the key features of multi unit risk assessment in one resource reviewing the practices adopted in various countries around the globe to exemplify the dependencies between units on a site These dependencies include multi unit interactions environmental stresses the sharing of systems and the sharing of human resource in a control room factors which can all introduce an increase potential for heightened accident conditions This book helps readers systematically identify events and evaluate techniques of possible accident outcomes within multi units It serves as a ready reference for PSA analysts in identifying a suitable site and the sharing of resources while carrying out multi unit risk assessments to ensure the safety of the public and the environment It will also be valuable for nuclear researchers designers and regulators of nuclear power plants nuclear regulatory agencies PSA engineers and practicing safety professionals Provides a framework for nuclear and PSA researchers and professionals on the design and operation of multi unit risk assessments Reviews practices adopted in various regions around the globe to analyze dependencies between units Includes modeling techniques of inter connections and shared resources as well as risk aggregation

the book puts a particular focus on the modern RISC V ISA with several case studies covering modeling as well as VP and SW verification aspects

The Empirical Validation of House Energy Rating (HER) Software for Lightweight Housing in Cool Temperate Climates Mark Andrew Dewsbury, 2015-02-02 This book reports on the first empirical validation of AccuRate Australia's national benchmark software tool for house energy ratings The validation was conducted by the University of Tasmania in collaboration with Forest and Wood Products Australia the Australian Government the CSIRO and industry partners The study presented here describes the results of graphical and statistical analysis of variations observed between the measured and simulated data from three different test buildings in Launceston Tasmania It shows that while the AccuRate software is well suited to modeling energy flows there are discrepancies between the simulated and measured temperatures of the test buildings Moreover it highlights possible connections between the discrepancies in all zones and the outside air temperature wind speed global and diffuse solar radiation and possibly the ground model Beyond its contribution to further investigations into the ongoing improvement and calibration of the Australian NatHERS supported AccuRate software this book also meticulously describes the methodology used in conducting the research which is expected to pave the way for further studies of this type
