  - a. All organisms acquire and use energy
  - b. Maintain homeostasis (internal constancy)
2. Cells
  - a. All organisms are made of membrane-bound cells
3. Information
  - a. All organisms process hereditary information and information from the environment
4. Growth and replication
  - a. All organisms are capable of growth and reproduction
5. Evolution
  - a. Populations of organisms are continually evolving

### Is it alive?

Check for the five characteristics

- Energy
- Organization
- Internal constancy
- Reproduction, growth, and development
- Evolution

**The characteristics of life:** all organisms are made of cells

- Cells are the basic units of life
- Every organism, or living individual, consists of one or more cells
  - Bacterial and Archaea Domains
    - Cells lack nuclei (prokaryotic)
    - Most are unicellular
  - Protista (multiple kingdoms)
    - Unicellular or multicellular
    - Autotrophs or heterotrophs

### Life is Organized

*Empiricism and Darwin's Science* F. Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work

**The Social Meaning of Modern Biology** Howard Kaye, 2017-07-05 The Social Meaning of Modern Biology analyzes the cultural significance of recurring

attempts since the time of Darwin to extract social and moral guidance from the teachings of modern biology. Such efforts are often dismissed as ideological defenses of the social status quo of the sort wrongly associated with nineteenth century social Darwinism. Howard Kaye argues they are more properly viewed as culturally radical attempts to redefine who we are by nature and thus rethink how we should live. Despite the scientific and philosophical weaknesses of arguments that biology is destiny and their dehumanizing potential in recent years they have proven to be powerfully attractive. They will continue to be so in an age enthralled by genetic explanations of human experience and excited by the prospect of its biological control. In the ten years since the original edition of *The Social Meaning of Modern Biology* was published changes in both science and society have altered the terms of debate over the nature of man and human culture. Kaye's epilogue thoroughly examines these changes. He discusses the remarkable growth of ethology and sociobiology in their study of animal and human behavior and the stunning progress achieved in neuropsychology and behavioral genetics. These developments may appear to bring us closer to long sought explanations of our physical, mental and behavioral machinery. Yet as Kaye demonstrates attempts to use such explanations to unify the natural and social sciences are mired in self contradictory accounts of human freedom and moral choice. *The Social Meaning of Modern Biology* remains a significant study in the field of sociobiology and is essential reading for sociologists, biologists, behavioral geneticists and psychologists.

#### **The Visionary Window** Amit

Goswami, 2012-12-19 Does God exist? Can spirituality be integrated with science? Is happiness possible? Do miracles really happen? Not only does *The Visionary Window* answer yes to all of these questions but it skillfully combines the fields of philosophy, cosmology, religion and psychology to form a new way of thinking about science and spirituality. Stepping beyond the classic work of prominent seventies physicist Fritjof Capra, Goswami details his own pioneering exploration of science and spirit, revealing the complete integration between modern science and spiritual traditions. Using stories and colorful examples from pop culture, Goswami addresses complex issues in language and terminology easily accessible to the lay reader. He provides quantum physics based theory and new experimental data verifying the metaphysical truth that exists when employed in the context of a new science: science within the primacy of consciousness. With a new holistic worldview, Goswami also discusses the creativity of the body to self heal, the power of spiritual practice and how to choose a meditative path and the five stages of spiritual growth culminating in the ability to transcend the physical laws of nature. Readers, scientists and spiritual leaders alike will find answers to many of life's deepest mysteries.

#### **The State of Nature** Gregg

Mitman, 1992-10 Although science may claim to be objective, scientists cannot avoid the influence of their own values on their research. In *The State of Nature*, Gregg Mitman examines the relationship between issues in early twentieth century American society and the sciences of evolution and ecology to reveal how explicit social and political concerns influenced the scientific agenda of biologists at the University of Chicago and throughout the United States during the first half of this century. Reacting against the view of nature red in tooth and claw, ecologists and behavioral biologists such as Warder Clyde Allee

Alfred Emerson and their colleagues developed research programs they hoped would validate and promote an image of human society as essentially cooperative rather than competitive Mitman argues that Allee's religious training and pacifist convictions shaped his pioneering studies of animal communities in a way that could be generalized to denounce the view that war is in our genes

Simon Schuster has a great book for every reader

Modern Principles of Economics Tyler Cowen, Alex Tabarrok, 2009-10-09 From the authors See the Invisible Hand Understand Your World That's the tagline of Modern Principles and our teaching philosophy Nobel laureate Vernon Smith put it this way At the heart of economics is a scientific mystery a scientific mystery as deep fundamental and inspiring as that of the expanding universe or the forces that bind matter How is order produced from freedom of choice We want students to be inspired by this mystery and by how economists have begun to solve it Thus we show how markets interconnect and respond in surprising ways to changes in resources and preferences Consider for example how markets respond to a reduction in the supply of oil Of course the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar An increase in the price of sugar means a reduction in the quantity of candy demanded So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy In analyses like this we teach students to see the invisible hand and in so doing to understand their world Similarly we offer a unique and simple proof of the amazing invisible hand theorem that without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs To understand their world students must understand when self interest promotes the social interest and when it does not Thus Modern Principles has in depth analyses of externalities public goods and ethical issues with market incomes and trade Moreover we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries climate change and the shortage of human organs for transplant

*Instinct and Revelation* Alondra Oubre, 2013-10-11 Instinct and Revelation revolves around the hypothesis that ritual behavior and imaginative awareness in early hominids may have helped to spawn the evolution of the human brain and human consciousness Using an integral perspective comparable with systems theory the book carefully interweaves fact and theory from physical and cultural anthropology psychobiology and the brain sciences psychology and to a lesser degree eastern philosophy This book breaks from tradition by discussing from a primarily anthropological perspective the origin of human consciousness within a philosophical framework that embraces precepts from human evolution evolutionary psychology the neurosciences biocultural anthropology and cultural symbolic anthropology
