**Managing Maintenance Error** James Reason, Alan Hobbs, 2017-03-02 Situations and systems are easier to change than the human condition particularly when people are well trained and well motivated as they usually are in maintenance organisations This is a down to earth practitioner s guide to managing maintenance error written in Dr Reason s highly readable style It deals with human risks generally and the special human performance problems arising in maintenance as well as providing an engineer s guide for their understanding and the solution After reviewing the types of error and violation and the conditions that provoke them the author sets out the broader picture illustrated by examples of three system failures Central to the book is a comprehensive review of error management followed by chapters on managing person the task and the team the workplace and the organization creating a safe culture It is then rounded off and brought together in such a way as to be readily applicable for those who can make it work to achieve a greater and more consistent level of safety in maintenance activities The readership will include maintenance engineering staff and safety officers and all those in responsible roles in critical and systems reliant environments including transportation nuclear and conventional power extractive and other chemical processing and manufacturing industries and medicine Federal Register ,2001-11

**Unsettled Topics on the Use of IVHM in the Active Control Loop** Rhonda Walthall, 2020-07-01 The growth in global economies has led to a world that has become much more mobile in the last few decades The number of enplanements has increased and is expected to continue to do so at an annual average rate of 1.8% through 2039.1 Prior to the COVID-19 pandemic the number of aircraft in service was expected to increase annually to meet the travel demand Next generation more complex aircraft were scheduled to replace the older aircraft at a pace that still allowed sufficient capacity to meet the increasing demand The events of 2020 have driven the industry to accelerate retirement of older aircraft while deferring the introduction of new aircraft While the length of the industry recovery period cannot be predicted most analysts believe that demand for travel will return once a vaccine is widely available The impact to the design of next generation aircraft will likely be shaped by technologies that are being accelerated for the post COVID world as well as for new mobility platforms Technologies such as artificial intelligence and fault tolerant and self adapting control will use integrated vehicle health management IVHM capabilities as part of the decision making processes This SAE EDGE Research Report seeks to explore the unsettled issues surrounding embedding IVHM information into the active control loops of modern aircraft systems and in future generations of aircraft designs NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the challenges they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020011> *Transdisciplinary*
