R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National  
Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12  
in the United States These Standards prompted the development of Standards based mathematics curricula What features  
characterize Standards based curricula How well do such curricula work To answer these questions the editors invited  
researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the  
effects of these curricula on students learning and achievement and to provide evidence for any claims they made In  
particular authors were asked to identify content on which performance of students using Standards based materials differed  
from that of students using more traditional materials and content on which performance of these two groups of students was  
virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write  
critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula  
provides a historical background to place the current curriculum reform efforts in perspective a summary of recent  
recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student  
outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high  
schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at  
the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to  
guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to  
the references provided at the end of each chapter other references about the Standards based curriculum projects are  
provided at the end of the book This volume is a valuable resource for all participants in discussions about school  
mathematics curricula including professors and graduate students interested in mathematics education curriculum  
development program evaluation or the history of education educational policy makers teachers parents principals and other  
school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational  
values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school  
mathematics curricula and related research      *Publications, No. 1-132, 134-140* Herbert Anderson Toops, 1929      *Bulletin*
