Convection in Porous Media D.A. Nield,Adrian Bejan,2013-03-09 Papers on convection in porous media continue to be published at the rate of over 100 per year This indication of the continued importance of the subject together with the wide acceptance of the first edition has encouraged us to prepare an expanded second edition We have retained the basic structure and most of the text

of the first edition With space considerations in mind we have been selective in our choice of references but nevertheless there are over 600 new references We also made an effort to highlight new conceptual developments and engineering applications In the introductory material we judged that Chapters 2 and 3 needed little alteration though there is a new Section 2.6 on other approaches to the topic but our improved understanding of the basic modeling of flow through a porous medium has led to a number of changes in Chapter 1 both within the old sections and by the addition of a section on turbulence in porous media and a section on fractured media deformable media and complex porous structures In Chapter 4 on forced convection we have added major new sections on compact heat exchangers on heatlines for visualizing convection and on constructal tree networks for the geometric minimization of the resistance to volume to point flows in heterogeneous porous media
