## Geography

**Geomorphology – geographical skills and techniques**

This support pack for *Our Communities* provides a range of resources to assist with the preparation for the suggested investigation on *Our Communities* from the section 11.1 CAPS content statement. Geomorphological sub-systems contribute to the formation of the landscape. However, the distribution of geomorphological features varies across regions. Through the use of maps, photographs and the internet, learners could explore their landscape and its characteristics, identify the evidence that can be used to determine the past of the landscape. This sub-system is an ideal topic for the study of 11.1 which is closely related to the CAPS content statement.

For further advice learners are encouraged to study the Additional CAPS suggested investigations on the website [www.education.gov.za](http://www.education.gov.za).

**Treatise on Geomorphology**, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues

for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Assessment in Geographical Education: An International Perspective Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27

In recent years there has been increased attention paid to the importance of assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia

USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills Periglacial and Paraglacial Processes and Environments Jasper Knight,Stephan Harrison,2009

Periglacial and paraglacial environments located outside ice sheet margins but responding to similar climate forcings are key to identifying climate change effects upon the Earth system These environments are relicts of cold Earth processes and so are most sensitive to global warming Changes in the distribution and thickness of permafrost in continental interiors have implications for ecosystem and landscape stability Periglacial Alpine environments are experiencing increased rockfall and mass movement leading to rock glacier instability and sediment release to downstream rivers In turn these landscape effects impact on natural hazards and human activities in these sensitive and geologically transient environments **CRREL**

U.S. Geological Survey Professional Paper, 1966 *Material Fluxes on the Surface of the Earth* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Earth Sciences and Resources, 1994-02-01 Understanding the ebb and flow of materials on the earth's surface is vital to comprehending environmental change We need to differentiate between those that represent a progression of natural events from those that might be human induced The latter can be managed by changing policies the former probably cannot This volume presents what researchers know and do not know about the base or natural level of surficial fluxes and their dynamics Leading experts in the field offer a historical perspective on geofluxes and discuss the cycles of

materials on the earth's surface from weathering processes to the movement of material through the river system and oceans to their deposition. The committee sets research directions in five areas: shallow water studies, mapping rates of change, sample dating, and most critical, understanding whether human influence can exceed the natural variability in geoflux processes. This volume will be important reading for geophysical scientists, researchers, faculty, and students, as well as environmental policymakers.

European Glacial Landscapes David Palacios, Philip D. Hughes, Jose M. Garcia-Ruiz, Nuria de Andrés, 2021-11-19. *European Glacial Landscapes: Maximum Extent of Glaciations* brings together relevant experts on the history of glaciers and their impact on the landscape of the main regions of Europe. In some regions, the largest recorded glaciations occurred before the Last Glacial Cycle, in one of the major glacial cycles of the Middle Pleistocene. However, the best preserved evidence of glaciation in the landscape is from the Last Glacial Cycle, Late Pleistocene. The book also analyses these older glacial landforms that can sometimes still be seen in the landscape today. This analysis provides a better understanding of the succession of Pleistocene glaciations and the intervening interglacial periods, examining their possible continental synchrony or asynchrony of past glacier behaviour. The result of this analysis gives important new insights and information on the origin and effects of climatic and geomorphological variability across Europe. *European Glacial Landscapes: Maximum Extent of Glaciations* examines the landscapes produced by glaciers throughout Europe, the geomorphological effects of glaciations, as well as the chronology and evolution of the past glaciers, with the aim of understanding the interrelationship between glacial expansion and climate changes on this continent. This book is a valuable tool for geographers, geologists, environmental scientists, researchers in physics and earth sciences. Provides a synthesis that highlights the main similarities or differences through both space and time during the maximum recorded expansions of Pleistocene glaciers in Europe. Features research from experts in glacial geomorphology, palaeo-glaciology, palaeo-climatology, and palaeo-oceanography on glacial expansion in Europe. Includes detailed color figures and maps providing a comprehensive comparison of the glacial landscapes of European Pleistocene glaciers. *Geological Survey Professional Paper* Geological Survey (U.S.), 1966.

After a research history, a general description of glaciokarsts is provided. Thereafter, the glacial erosion on karst, the karstic features of glaciokarsts, the development of these features, the karstic zones of glaciokarsts, surface development of glaciokarsts, case studies on glaciokarsts, and an overview of the glaciokarsts of the Earth are presented.

Caves and Karst Across Time Yongli Gao, E. Calvin Alexander Jr., 2016-01-28. Knowledge and understanding of cave and karst systems have evolved dramatically since the creation of the Geological Society of America in 1888. This book, which came out of a session during GSA's 2013 Annual Meeting, highlights the changes in the study and application of cave and karst systems since GSA's origin while looking ahead to future advancements.

*Scotland's Mountain Landscapes*

Haritashya, 2011-06-29 The earth's cryosphere which includes snow glaciers ice caps ice sheets ice shelves sea ice river and lake ice and permafrost contains about 75% of the earth's fresh water It exists at almost all latitudes from the tropics to the poles and plays a vital role in controlling the global climate system It also provides direct visible evidence of the effect of climate change and therefore requires proper understanding of its complex dynamics This encyclopedia mainly focuses on the various aspects of snow ice and glaciers but also covers other cryospheric branches and provides up to date information and basic concepts on relevant topics It includes alphabetically arranged and professionally written comprehensive and authoritative academic articles by well known international experts in individual fields The encyclopedia contains a broad spectrum of topics ranging from the atmospheric processes responsible for snow formation transformation of snow to ice and changes in their properties classification of ice and glaciers and their worldwide distribution glaciation and ice ages glacier dynamics glacier surface and subsurface characteristics geomorphic processes and landscape formation hydrology and sedimentary systems permafrost degradation hazards caused by cryospheric changes and trends of glacier retreat on the global scale along with the impact of climate change This book can serve as a source of reference at the undergraduate and graduate level and help to better understand snow ice and glaciers It will also be an indispensable tool containing specialized literature for geologists geographers climatologists hydrologists and water resources engineers as well as for those who are engaged in the practice of agricultural and civil engineering earth sciences environmental sciences and engineering ecosystem management and other relevant subjects

**Thawing Permafrost** J. van Huissteden, 2020-01-01 This book provides a cross disciplinary overview of permafrost and the carbon cycle by providing an introduction into the geographical distribution of permafrost with a focus on the distribution of permafrost and its soil carbon reservoirs The chapters explain the basic physical properties and processes of permafrost soils ice mineral and organic components and how these interact with climate vegetation and geomorphological processes In particular the book covers the role of the large quantities of ice in many permafrost soils which are crucial to understanding carbon cycle processes An explanation is given on how permafrost becomes loaded with ice and carbon Gas hydrates are also introduced Structures and processes formed by the intense freeze thaw action in the active layer are considered e.g. ice wedging cryoturbation and the processes that occur as the permafrost thaws pond and lake formation erosion The book introduces soil carbon accumulation and decomposition mechanisms and how these are modified in a permafrost environment A separate chapter deals with deep permafrost carbon gas reservoirs and recently discovered methane emission phenomena from regions such as Northwest Siberia and the Siberian yedoma permafrost
