

## HESI RN PEDIATRIC EXAM STUDY GUIDE 2020/2021 (GRADED A+)

Which client requires immediate intervention by the RN?

- A. A child with cystic fibrosis who is constipated.
- B. A toddler with chicken pox who is scratching.
- C. A child with acute renal failure and hyperkalemia.
- D. An adolescent with a migraine and photophobia.

A 7 year old male is referred to the school clinic because he fainted on the playground. His height is 3 feet, 7 inches (107.5 cm), he weighs 55 pounds (25 kilograms), and his body mass index (BMI) is 20.9. Which assessment finding is most important for the RN to address?

- A. He consumed 2 bottles of water in 30 minutes prior to fainting.
- B. Since age 3 he has experienced exercise induced asthma.
- C. Reports drinking 3-4 high calorie, carbonated beverages daily.
- D. The child's father has a history of fainting when exercising.

The RN of a 6 year old girl is concerned about her child's obesity. The child's weight plots at the 75<sup>th</sup> percentile, and height at the 25<sup>th</sup> percentile. The child's body mass index (BMI) is at the 85<sup>th</sup> percentile for age and gender. Which interventions should the RN implement? (Select All That Apply)

- A. Explain that the child is likely to grow into her weight.
- B. Determine the child's usual physical activity pattern.
- C. Obtain the child's 3- day diet history based on the mother's input.
- D. Inquire as to whether or not the school has a physical education program.
- E. Tell the mother that girls hit their growth spurt before boys so eating more is expected.

(B, C, and D) are correct. The child's growth parameters, particularly her BMI, indicate that she is overweight. (B and D) assess for the child's level of activity, which should be evaluated and increased if possible. (C) Provides information about the quantity and quality of the child's dietary intake, which is information that is needed to create an individualized diet teaching plan. (A) Does not consider the serious health and psychological consequences associated with childhood obesity. Girls do not hit their growth spurt before boys in preadolescence, but this child is only 6 years of age and the child's obesity should not be negated because of this growth and development expectation. (e)

A toddler with hemophilia is being discharged from the hospital. Which teaching should the RN include in the discharge instructions to the mother?

- A. Apply padding on the sharp corners of the furniture.

transformative experience can often feel demanding and complex as each person becomes intensely focused on the quest for procreation potentially losing sight of their own individuality. Alongside this struggle, issues related to sexual function may arise, leading to conflicts within the partnership, mood disorders, and even the development of addictive behaviors such as overeating or engagement with pornography. This book offers comprehensive knowledge and insights for healthcare professionals as they assist couples in navigating this emotionally charged path. It provides invaluable information to help professionals better understand the intricate emotional and psychological dynamics at play, including the impact of sexual dysfunction and strategies for addressing conflicts within the partnership. The ultimate goal of this book is to empower care providers to guide couples along this path with informed and personalized approaches.

**Encyclopedia of Infant and Early Childhood Development** Marshall M. Haith, Janette B. Benson, 2008-02-19. Infancy is a unique period in that at no other state is there greater growth and development. During this time, growth is occurring at a physical level, but equally impressive are the socio-emotional and cognitive developments. During this time, Genetics, the womb environment, and the physical environment after birth all combine to impact the rate and manner of growth. Who we ultimately become as individuals begins here. Intended for university and public libraries, the Encyclopedia of Infant and Early Childhood Development is the major reference work that provides a comprehensive entry point into all of the existing literature on child development from the fields of psychology, genetics, neuroscience, and sociology. The scope of this work is to understand the developmental changes when they occur, why they occur, how they occur, and those factors that influence that development. Although some medical information is included, the emphasis is on normal growth and is primarily from a psychological perspective. Cutting edge content will encompass the period of time from neonates to age three. Award-winning Editors in Chief to ensure authoritative quality. Organized alphabetically by topic for ease of reference. Each article will include a glossary defining any unique terms. Suggested readings at the end of each article provide a resource for additional information. Extensively cross-referenced within the work to enable reader access to full and relevant information related to their interests. Online availability via ScienceDirect platform.
