Prassas, 2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United

States It has also been widely used abroad and has spurred the development of similar manuals in other countries The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios The manual also addresses related pedestrian bicycle and transit issues This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types The book is comprised of two volumes Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come
