Instrumentos Industriales: Su Ajuste y Calibración Antonio Creus Solé, 2009-03-18 Los instrumentos de medición y control permiten garantizar la calidad y competitividad de los productos fabricados en una planta industrial y para que realicen correctamente su función deben estar bien calibrados y tener un ajuste correcto en sus acciones de control La realización de un buen mantenimiento conseguir este objetivo Puede decirse que el mantenimiento de los instrumentos ha pasado de ser un mal necesario a ser un objetivo indispensable para que la planta funcione sin paros no programados e intempestivos La creciente aplicación de los instrumentos digitales inteligentes con las facilidades de autodiagnóstico y localización de averías contribuye sin duda a un mantenimiento más fácil pero obliga a una buena formación del personal de mantenimiento Desde cualquier punto de la red digital puede consultarse el estado de los instrumentos y es posible programar anticipadamente las operaciones de mantenimiento a realizar El mantenimiento correctivo se está aplicando cada vez menos por los inconvenientes de averías imprevistas que pueden dar lugar al paro de la planta con la pérdida económica correspondiente y en su lugar se utiliza cada vez más el mantenimiento preventivo y en particular el mantenimiento predictivo que permite programar las operaciones de mantenimiento conociendo en todo momento el estado de los instrumentos No obstante los

elementos primarios las vlvulas de control convencionales y los instrumentos neumáticos y electrónicos clásicos precisan todavía de la reparación y su posterior calibración en el taller NDICE
