Hello World Hannah Fry, 2018-09-18. Shortlisted for the 2018 Baillie Gifford Prize and the 2018 Royal Society Investment Science Book Prize. A beautifully accessible guide. One of the best books yet written on data and algorithms. *Times UK*. If you were accused of a crime, who would you rather decide your sentence: a mathematically consistent algorithm incapable of empathy or a compassionate human judge prone to bias and error? What if you want to buy a driverless car and must choose between one programmed to save as many lives as possible and another that prioritizes the lives of its own passengers? And would you agree to share your family's full medical history if you were told that it would help researchers find a cure for cancer? These are just some of the dilemmas that we are beginning to face as we approach the age of the algorithm when it feels as if the machines reign supreme. Already, these lines of code are telling us what to watch, where to go, whom to date, and even whom to send to jail. But as we rely on algorithms to automate big important decisions in crime, justice, healthcare, transportation, and money, they raise questions about what we want our world to look like. What matters most? Helping doctors with diagnosis or preserving privacy? Protecting victims of crime or preventing innocent people being falsely accused? *Hello World* takes us on a tour through the good, the bad, and the downright ugly of the algorithms that surround us on a daily basis. Mathematician Hannah Fry reveals their inner workings, showing us how algorithms are written and implemented and demonstrates the ways in which human bias can literally be written into the code. By weaving in relatable real-world stories with accessible explanations of the underlying mathematics that power algorithms, *Hello World* helps us to determine their power, expose their limitations, and examine whether they really are an improvement on the human systems they replace.

The Scientific Journal Alex Csiszar, 2018-06-25. Not since the printing press has a media object been as celebrated for its role in the advancement of knowledge as the scientific journal. From open communication to peer review, the scientific journal has long been central both to the identity of academic scientists and to the public legitimacy of scientific knowledge. But that was not always the case. At the dawn of the nineteenth century, academies and societies dominated elite study of the natural world. Journals were a relatively marginal feature of this world and sometimes even an object of outright suspicion. *The Scientific Journal* tells the story of how that changed. Alex Csiszar takes readers deep into nineteenth-century London and Paris where savants struggled to reshape scientific life in the light of rapidly changing political mores and the growing importance of the press in public life. The scientific journal did not arise as a natural solution to the problem of communicating scientific discoveries. Rather, as Csiszar shows, its dominance was a hard-won compromise.

born of political exigencies shifting epistemic values intellectual property debates and the demands of commerce Many of the tensions and problems that plague scholarly publishing today are rooted in these tangled beginnings As we seek to make sense of our own moment of intense experimentation in publishing platforms peer review and information curation Csizar argues powerfully that a better understanding of the journal s past will be crucial to imagining future forms for the expression and organization of knowledge

The Triangle-Free Process and the Ramsey Number $R(3,k)$ Gonzalo Fiz Pontiveros,Simon Griffiths,Robert Morris,2020-04-03 The areas of Ramsey theory and random graphs have been closely linked ever since Erd s s famous proof in 1947 that the diagonal Ramsey numbers R_k grow exponentially in k In the early 1990s the triangle free process was introduced as a model which might potentially provide good lower bounds for the off diagonal Ramsey numbers $R_{\neq 3}(k)$ In this model edges of K_n are introduced one by one at random and added to the graph if

they do not create a triangle the resulting final random graph is denoted G_n In 2009 Bohman succeeded in following this process for a positive fraction of its duration and thus obtained a second proof of Kim's celebrated result that $R(3, k) \leq k^2 \log k$ In this paper the authors improve the results of both Bohman and Kim and follow the triangle free process all the way to its asymptotic end
