Democratic Education in Practice Matthew Knoester, 2015-04-25. The Mission Hill School founded by MacArthur Award winner Deborah Meier and colleagues in 1997 is a small public school that has rethought almost everything about the process of teaching and learning. Beyond richly describing and evaluating this high achieving school the author argues that democratic education is increasingly difficult in this era of testing and standardization and that a school such as Mission Hill must be continually thoughtful innovative and courageous in counteracting systemic inequality. This in depth examination is essential reading for anyone interested in how to better understand seemingly intractable problems related to urban public education in the United States. Book Features: An exemplary model of democratic education that shows the inner workings of a largely teacher governed school. A rare example of an urban school implementing Dewey influenced progressive pedagogy. In depth descriptions of an anti racist and culturally relevant pedagogy and curriculum. A close examination of successful practices including shared decision making intensive problem solving and looking at student work. Matthew Knoester is a National Board Certified Teacher and former teacher at the Mission Hill School in Boston. He received his Ph D in Curriculum and Instruction from the University of Wisconsin Madison and is currently Assistant Professor of Education at the University of Evansville. Matthew Knoester has done us an enormous favor by showing us in detail what could be one example of how schools can be the building blocks for democracy recreating community for all to taste feel hear and see. From the Foreword by Deborah W Meier. This is exactly the kind of book that is so necessary at this time. Schools can be respectful responsive and caring places. Matthew Knoester gives us a detailed picture of such a school. If more people would read books such as this the national debate on education would be all the better for it. Michael W Apple. John Bascom. Professor of Curriculum and Instruction and Educational Policy Studies. University of Wisconsin Madison. Knoester's account of the Mission Hill School captures the habits of mind needed if public schools are to be truly democratic in spirit and in practice centered on the children and as Deborah Meier so powerfully advocates protected from those policies and social forces that accept and perpetuate disengagement and inequality in our children's education. Linda McSpadden McNeil. Professor of Education. Rice University. author of *Contradictions of School Reform*. To those who have never seen the Mission Hill School in Boston it may sound like a magical place. The good news is that it is real and Knoester shows us through his compelling narrative how and why they have been able to achieve so much. For educators students and parents this book will be a source of inspiration. At a time when our policymakers and many so called reformers are actively undermining support for public education this important book will serve as a reminder that we can do a much better job at educating all children. lessons learned *The Academic Portfolio* Peter Seldin, J. Elizabeth Miller, 2010-12-28 This comprehensive book focuses squarely on academic portfolios which may prove to be the most innovative and promising faculty evaluation and development technique in years. The authors identify key issues, red flag warnings and benchmarks for success, describing the what, why and how of developing academic portfolios. The book includes an extensively tested step by step approach to creating portfolios and lists 21 possible portfolio items covering teaching, research, scholarship and service from which faculty can choose the ones most relevant to them. The thrust of this book is unique. It provides time tested strategies and proven advice for getting started with portfolios. It includes a research based rubric grounded in input from 200 faculty members and department chairs from across disciplines and institutions. It examines specific guiding questions to consider when preparing every subsection of the portfolio. It presents 18 portfolio models from 16 different academic disciplines. Designed for faculty members, department chairs, deans and members of promotion and tenure committees, all of whom are essential partners in developing successful academic portfolio programs, the book will also be useful to graduate students, especially those planning careers as faculty members.

Young Children and Families in the Information Age Kelly L. Heider, Mary Renck Jalongo, 2014-12-05 This edited book presents the most recent theory, research and practice on information and technology literacy as it relates to the education of young children. Because computers have made it so easy to disseminate information, the amount of available information has grown at an exponential rate, making it impossible for educators to prepare students for the future without teaching them how to be effective information managers and technology users. Although much has been written about information literacy and technology literacy in secondary education, there is very little published research about these literacies in early childhood education. Recently, the National Association for the Education of Young Children and the Fred Rogers Center for Early Learning and Children's Media at Saint Vincent College published a position statement on using technology and interactive media as tools in early childhood programs. This statement recommends more research to better understand how young children use and learn with technology and interactive media and also to better understand any short and long term effects. Many assume that today's young children are digital natives with a great understanding of technology. However, children may know how to operate digital technology but be unaware of its dangers or its value to extend their abilities. This book argues that information and technology literacy include more than just familiarity with the digital environment. They include using technology safely and ethically to demonstrate creativity and innovation, to communicate and collaborate, to conduct research and use information and to think critically, solve problems and make decisions.
