International Telecommunications Regime: Domestic Preferences and Regime Change Juan

Ratto-Nielsen, 2009-12-26 This study examines the evolution of the international regime in telecommunications with the main objective of furthering our understanding of the process of regime transformation. The dominant theories of international relations, realism and institutional liberalism, specify how states with shared interests use institutions to realize joint gains and to minimize the possibility of defection. But these theories have little to say about when states will attempt to change the objectives that lead them to create the international institution in the first place. The main goal of this book is to investigate and test the assumption that domestic politics by themselves can explain the dynamics of regime creation, evolution, and change as it happened within the International Telecommunications Union (ITU). **Handbook of Communications**

Security F. Garzia, 2013 Communications represent a strategic sector for privacy protection and for personal, company, national, and international security. The interception, damage, or loss of information during communication can generate material and non-material economic damages from both a personal and collective point of view. The purpose of this book is to give the reader information relating to all aspects of communications security, beginning at the basic ideas and building to reach the most advanced and updated concepts. The book will be of interest to integrated system designers, telecommunication designers, system engineers, system analysts, security managers, technicians, intelligence personnel, security personnel, police, army, private investigators, scientists, graduate and postgraduate students, and anyone that needs to communicate in a secure way.
