

Model 2 – Random Sampling Method

- a. According to Model 2, what is the probability of selecting a red die in a random draw out of the bag?

The probability of selecting a red die in a random draw out of the bag is 50% (0.5).

- b. Suppose you draw a die from the bag and find it is red. How does this information in a single case impact on the probability of selecting a red die in subsequent draws? Explain.

The probability of selecting a red die is determined by using replacement, not by adding one more red die to the bag. If you draw a red die, you should be more confident in that the probability of getting a red die will get either higher or that not whether you get red or the same thing again or not.
