Hooker, 2001 Plant Cell and Tissue Culture for the Production of Food Ingredients Tong-Jen Fu, Gurmeet Singh, Wayne R. Curtis, 2012-12-06 Commercial development of cultured derived food ingredients has attracted international interest As consumers have become more health conscious in recent years the demand for natural food ingredients and disease preventative phytochemicals has increased tremendously Plant Cell and Tissue Culture provides an alternative method for controlled production of these products A wide range of food ingredients has been shown to be produced in culture Much progress has been made in advancing this technology to the point that large scale production has become possible This book is developed from the Symposium Plant Cell and Tissue Culture for Food Ingredient Production which was held on April 13-17 1997 at the American Chemical Society National Meeting in San Francisco CA In this book international experts in academia government and industry discuss current advances in the field of plant cell and tissue culture with special emphasis on its application for food ingredient production Topics related to various aspects of plant cell and tissue culture technology are discussed including overviews of recent advances in plant metabolic pathway studies process development for improving yields and bioreactor design and operation for large scale production Economic considerations and issues related to the commercial development of culture derived food ingredients are discussed Also included are the safety assessment schemes and regulatory frameworks set up by regulatory agencies around the world Chemistry of Structure-Function Relationships in Cheese Edyth L. Malin, Michael H. Tunick, 2013-11-11 Although the art of making cheese can be traced to prehistoric times it has continued to evolve as modern civilization progressed The advent of new technologies and instrumentation has brought exponential growth in the understanding of cheese components and their function Even more recently the evolution of cheesemaking has accelerated driven by economic factors such as the establishment of the European Economic Community the changing diet of developed countries and the environmental and economic concerns associated with whey disposal Molecular biology has revolutionized the development of starter and adjunct cultures as well as rennets and genetics will make it possible to maintain ideal milk components for cheesemaking The ability to accelerate traditional ripening procedures has altered the production of certain

cheeses and the emphasis on decreasing the intake of dietary fat especially in the United States has prompted the development of technology for producing low fat cheeses with traditional texture and flavor In assembling a distinguished group of participants for the symposium Chemistry of the Structure Function Relationships in Cheese we hoped to review the interplay of these trends and forecast the direction of future research Contributors evaluated the current status of cheesemaking and highlighted the information that will be essential for new developments They also focused the attention of agricultural and food chemists on the opportunities in cheese research and the potential contributions they might make to the future of cheese a most valuable food product We are indebted to Dr Patrick Fox Dr Mark Johnson Dr Milos Kalab Dr

Plant Surface Microbiology Ajit Varma, Lynette Abbott, Dietrich

Werner, Rüdiger Hampp, 2007-09-26 Most plants rely on the co existence with microorganisms both groups benefit from these symbioses It has been shown that a large number of specific genes in plants and microorganisms are only activated during these interactions Of course various microbes also act as pathogens Interactions between plants and microorganisms are often located on plant surfaces such as leaf cuticles seeds and mainly on the roots The communication between plants and microbes is the main topic treated in Plant Surface Microbiology such as the signaling within a symbiosis the molecular differences between symbiotic and pathogenic microorganisms the role of microorganisms in the development of plants or in plant protection against deleterious agents Further contributions are devoted to the analysis of bacterial communities in the rhizosphere microbial population genetics aspects of mycorrhizal symbiosis functional genomic approaches and the use of microorganisms as bio indicator of soil disturbance

Identification and

Determination of Impurities in Drugs S. Görög, 2000-05-19 Impurity profiling is the common name of a group of analytical activities the aim of which is the detection identification structure elucidation and quantitative determination of organic and inorganic impurities as well as residual solvents in bulk drugs and pharmaceutical formulations Since this is the best way to

characterise the quality and stability of bulk drugs and pharmaceutical formulations this is the core activity in modern drug analysis Due to the very rapid development of the analytical methodologies available for this purpose and the similarly rapid increase of the demands as regards the purity of drugs it is an important task to give a summary of the problems and the various possibilities offered by modern analytical chemistry for their solution That is the aim of this book The book is methodology oriented In the first chapter some important aspects of the background of impurity related analytical studies toxicological pharmacopoeial aspects the characterisation of the sources of impurities and the role of impurity profiling in various fields of drug research production and therapeutic use are summarised Chapter two deals with related organic impurities the strategies for impurity profiling the use of chromatographic and related separation methods spectroscopic and hyphenated techniques The subject of the third chapter is the identification and determination of residual solvents The determination of inorganic impurities is discussed in chapter four The special problems of degradation products as impurities are dealt with in chapter five A separate chapter has been compiled to deal with one of the most up to date problems in contemporary pharmaceutical analysis the estimation of enantiomeric purity of chiral drugs Chapter seven is devoted to various approaches to solve the problem of polymorphic modifications as impurities Since in the broader sense of the word the microbiological purity of drugs and drug products also belongs to this circle the most important information from this field is summarised in chapter eight After the mainly methodology oriented chapters the final one concentrates on four groups of drugs peptides biotechnological products antibiotics and steroids in order to demonstrate the use of the methods described earlier
