Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering Kim, Dookie, Sekhar Roy, Sanjiban, Länsivaara, Tim, Deo, Ravinesh, Samui, Pijush, 2018-06-15 The disciplines of science and engineering rely heavily on the forecasting of prospective constraints for concepts that have not yet been proven to exist especially in areas such as artificial intelligence Obtaining quality solutions to the problems presented becomes increasingly difficult due to the number of steps required to sift through the possible solutions and the ability to solve such problems relies on the recognition of patterns and the categorization of data into specific sets Predictive modeling and optimization methods allow unknown events to be categorized based on statistics and classifiers input by researchers The Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering is a critical reference source that provides comprehensive information on the use of optimization techniques and predictive models to solve real life engineering and science problems Through discussions on techniques such as robust design optimization water level prediction and the prediction of human actions this publication identifies solutions to developing problems and new solutions for existing problems making this publication a valuable resource for engineers researchers graduate students and other professionals

Building Common Interests in the Arctic Ocean with Global Inclusion Paul Arthur Berkman, Alexander N. Vylegzhanin, Oran R. Young, David A. Balton, Ole Rasmus Øvretveit, 2022-05-07 This book contains an inclusive compilation of perspectives about the Arctic Ocean with contributions that extend from Indigenous residents and early career scientists to Foreign Ministers involving perspectives across the spectrum of subnational national international jurisdictions The Arctic Ocean is being transformed with global climate warming into a seasonally ice free sea creating challenges as well as opportunities that operate short to long term underscoring the necessity to make informed decisions across a continuum of urgencies from security to sustainability time scales The Arctic Ocean offers a case study with lessons that are especially profound at this moment when humankind is exposed to a pandemic awakening a common interest in survival across our globally interconnected civilization unlike any period since the Second World War This second volume in the Informed Decisionmaking for Sustainability series reveals that building global inclusion involves common interests to address changes effectively for the benefit of all on Earth across generations

A Physiologically-Based Approach to Study Different Types of Locomotion in Association with Core Performance Erika Zemková, Magni Mohr, Dario Novak, Tomas Maly, 2024-11-11 Good posture and strong core muscles are essential for most athletic movements but also for everyday activities Among them walking and running require lumbo pelvic stability and mobility for efficient movement and high level performance This is especially important during a large range of trunk motions when changing the direction of movement an abrupt walk to run transition or extreme uphill and downhill walking or running Such repetitive trunk loading over time can contribute to occurrence of back problems and lower limb injuries To avoid these unwanted effects a novel approach to

studying the physiology of locomotion in relation to spine motion and balance function is required This can provide a basis for designing exercise programs specifically tailored for competitive athletes the healthy general population as well as those suffering from movement disorders So far much effort has been devoted to investigating the biomechanical and physiological variations of locomotion including walking running swimming or hopping However a surprising gap in the evidence is to what extent core strength contributes to effective locomotor performance and a healthy back Studying the neurophysiological mechanisms underlying the control of postural and core stability with special reference to locomotion is therefore of great importance

Property Rights in Outer Space Matthew Johnson, 2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre-emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights
