Android developer *Advanced Health Telematics and Telemedicine* Bernd Blobel, Peter Pharow, 2003 In this publication leading experts present all the different aspects to be met for practically enabling advanced health telematics and telemedicine such as architectural issues electronic health records communication security and safety as well as the legal and ethical implications The international collaboration work s outcome ongoing efforts and future directions are discussed in deep and broad detail Represented by health professionals computer scientists managers lawyers and politicians the book addresses developers users and decision makers as well *Java Vs. .NET Security* Denis Pilipchuk, Denis Pilipchouk, 2004-05-27 This document reviews security features of two most popular modern development platforms Java and NET Java v1 4 2 J2EE v1 4 and NET v1 1 The platform choice is not random because they represent to a certain extent competition between UNIX like and Windows systems which largely defined software evolution over the last decade Although Java applications run on Windows and there exist UNIX bridges for NET the Java UNIX and NET Windows combinations are used for development of a significant portion if not majority of applications on their respective operating systems so both platforms deserve a careful examination of their capabilities Such an examination is especially important since different aspects of UNIX Windows and Java NET competition have been flaming endless heated debates between proponents of both camps which often blindly deny merits of the opposite side while at the same time praising their preferred solution The material here is purposely structured by general categories of protection mechanism and reviewing each platform B G Bs features in those areas This allows starting each topic with a platform neutral security concept and performing relatively deep drill downs for each technology without losing track of the overall focus of providing an unbiased side by side comparison The document is based on the research material that was used as a foundation of the feature article *Securing NET and Enterprise Java Side by Side* which was written by Vincent Dovydaitis and myself and appeared in Numbers 3 4 of *Computer Security Journal* in 2002 The following areas will be considered Security Configuration and Code Containment Cryptography and Communication Code Protection and Code Access Security or CAS Authentication and User Access Security or UAS *Artificial Intelligence Research and Development* Isabel Aguiló, Llorenç Valverde, M.
