

APPLICATION OF BIOTECHNOLOGY IN PGR CONSERVATION AND MANAGEMENT

Crop germplasm collections are assemblies of genotypes or populations representative of cultivars, genetic stocks, wild species etc., which are maintained in the form of plants, seeds, tissue cultures etc. Functionally, plant genetic resources (PGR) can include landraces, advanced/improved cultivars and wild and weedy relatives of crop plants (either domesticated, semi-domesticated or non-domesticated).

The activities that relate to conservation use of PGR include: exploration and collecting; characterization and evaluation; conservation, assessment of variation and identification of useful genes; exchange and genetic enhancement. Exploration is a preliminary survey of an area where germplasm collecting is to be carried out, however due to resource constraints, most often exploration and collecting are carried out simultaneously.

Systematic characterization and evaluation of material. Conservation includes the management, preservation of known genetic resources. Conservation of PGR can be divided into two approaches, ex situ and in situ. Ex situ conservation maintains germplasm outside its original habitats in facilities that have been specifically created such as the seed, field and in vitro genebanks or botanical gardens.

The International Board for Plant genetic Resources (IBPGR) was established in 1974 to promote and coordinate the work on plant genetic resources globally and was linked to the Food and Agricultural Organization of the United Nations (FAO) for administrative purposes. During the last 20 years, along with many achievements to its credit, IBPGR has now grown into a fully independent institute, the International Plant Genetic Resources Institute (IPGRI) and is one of the 21 institutes in the Consultative Group on International Agricultural Research (CGIAR) system.

IPGRI's mandate is to advance the conservation and use of PGR for the benefit of present and future generations. IPGRI does not have either genebanks or laboratories. It works by collaborating with different partners who have an interest in conserving and using PGR.
