Taft,2015-03-17 After the crisis of 2008 the social contract between the financial industry and everyone else was badly broken perhaps it seemed irrevocably Since then banks have paid out billion dollar settlements and Congress has passed some new laws but a deeper rapprochement is still missing John Taft has gathered some of the greatest financial minds of our time to explore how Wall Street can harness the same creative energy that invented credit default swaps and channel it towards the public good in the form of a stable retirement system investment strategies that protect the environment and reward responsible corporate behavior and a financial industry with a culture of ethics integrity and client focus These perspectives from a who s who of leaders in the field offer a blueprint for a new kind of responsible finance and banking that secures the future for everyone Contributors include Robert Shiller on financial capitalism and innovation Charles D Ellis on restoring ethical standards Sheila Bair on regulatory reform John C Bogle and Mary Schapiro on rebuilding investor trust Judd Gregg on long term fiscal imbalances Barbara Novick on the retirement savings gap David Blood on sustainable finance With so much brainpower in the financial sector the potential for change is limitless A Force for Good is the call to action the industry sorely needs Cognitive Movement Ecology Eliezer Gurarie,Tal Avgar,2024-02-09 At least since Darwin argued

that the difference in cognitive abilities between animals and humans is one of degree and not of kind the study of animal cognition has been an active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems Who's Who in Finance and Business Marquis Who's Who, LLC,National Register Publishing,2005-12
