Caught in the Act Cyril Julie, Lorna Holtman, Charles R. Smith, 2019-12-11 The research reported in *Caught in the Act* draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers Mathematical Fluid Dynamics, Present and Future Yoshihiro Shibata, Yukihito Suzuki, 2016-12-01 This volume presents original papers ranging from an experimental study on cavitation jets to an up to date mathematical analysis of the Navier Stokes equations for free boundary problems reflecting topics featured at the International Conference on Mathematical Fluid Dynamics Present and Future held 11-14 November 2014 at Waseda University in Tokyo The contributions address subjects in one and two phase fluid flows including cavitation liquid crystal flows plasma flows and blood flows Written by internationally respected experts these papers highlight the connections between mathematical experimental and computational fluid dynamics The book is aimed at a wide readership in mathematics and engineering including researchers and graduate students interested in mathematical fluid dynamics *Neutrosophic Sets and Systems, Vol. VII* Florentin Smarandache, Mumtaz Ali, 2015-02-01 Twelve papers on soft interval valued neutrosophic rough sets fuzzy neutrosophic relation equations with geometric programming rough neutrosophic multi attribute decision making classes of neutrosophic crisp nearly open sets and possible application to GIS topology neutrosophic probability in physics and similar topics Contributors H E Khalid K Mondal S Pramanik A A Salama S Broumi F Smarandache F Yuhua M Ali M Shabir V Patrascu S Ye J Fu J Ye A Hussain and L Vladareanu *Trilingual Education in Hong Kong Primary Schools* Lixun Wang, Andy Kirkpatrick, 2019-02-26 This book focuses on Hong Kong as a multilingual society It investigates how trilingual education is implemented in Hong Kong primary schools Based on a large scale survey of 155 Hong Kong schools and in depth case studies in 3 selected schools the book gives an overview of trilingual education in Hong Kong primary schools revealing the views on trilingual education of all stakeholders school principals panel chairs subject teachers students and parents The research findings presented in this book suggest that the implementation of trilingual education varies significantly from school to school as does the effectiveness of the trilingual education models used It shows how students views towards the use of different media of instruction MoIs also vary and how their mother tongue backgrounds affect their perceptions By documenting views policies and implementation methods the book provides insight into the practice of trilingual education in Hong Kong and offers

suggestions on potentially effective implementation methods *Mathematics for Healthcare* Krasimira Tsaneva-Atanasova, Vanessa Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book *Computational Biology of the Heart* that biology was potentially the most mathematical of all sciences Fast forward 20 years and we have seen an explosion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort Biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human pathophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools This collection of articles represents a snapshot in a field that is moving a dizzying speed bringing understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world *Neutrosophic Sets and Systems, vol. 7/2015* H. HC 258 - Academies and Free Schools Great Britain. Parliament. House of Commons. Education Committee,2015 The landscape of schooling in England has been transformed over the last five years Academy sponsorship has encouraged and facilitated the contribution of individuals not previously involved in education provision and laid down a challenge to maintained schools to improve or face replacement by the insurgent academy model The development of outstanding Multi Academy Trusts like Ark and Harris offers an alternative system to the one overseen by local authorities while the unified Ofsted inspection regime and published performance data generally allows fair judgment of comparative performance There is a complex relationship between attainment autonomy collaboration and accountability Current evidence does not allow the Committee to draw conclusions on whether academies in themselves are a positive force for change This is partly a matter of timing but more information is needed on the performance of individual academy chains Most academy freedoms are in fact available to all schools and Committee recommends that curriculum freedoms are also extended to maintained schools

Documenting Impossible Realities Susan Bibler Coutin, Barbara Yngvesson, 2023-04-15 Documenting Impossible Realities explores the limitations of conventional accounts through which belonging is documented focusing on the

experiences of adoptees deportees migrants and other exilic populations Susan Bibler Coutin and Barbara Yngvesson speak to the current historical moment in which the dichotomy between an above ground inhabited by dominant groups and an underground to which unauthorized immigrants political exiles and transnational adoptees are relegated cannot be sustained This dichotomy was made possible by the illusion that some people do not belong that some forms of kin are not real or that certain ways of knowing do not count To examine accounts that challenge such illusions Coutin and Yngvesson focus on the spaces between groups where difference is constituted and where the potential for new forms of relationship may be realized By juxtaposing and moving between entangled realities and modes of expression Documenting Impossible Realities conveys the emotional experience of oscillating between being here and gone legitimate and treated as counterfeit
