

TOUCH SWITCH/PLATE

Introduction

The kit combines a touch switch and a touch plate all together in the same kit. In the touch switch two leads must be shorted together by your finger touching them. In the touch plate one plate needs to be touched. The touch switch only needs a battery to activate it but the touch plate requires a main power supply. A relay rated at 240V is included with the kit so that you may use to switch light or other mains appliances. To use the relay you must use a 12V supply taken from the main power supply.

The use of the relay to switch 220V supply with this project must use the correct boxes and connectors to protect us. The kit is constructed on a single sided printed circuit board (PCB). A computer aided design programme is used to design the board.

CIRCUIT DIAGRAM

CIRCUIT DESCRIPTION

The main part of the circuit are the two NAND gates of the 4011 IC which are connected as a flip-flop. Pins 9 and 13 are the ON and OFF contacts. The two gates are connected to the positive rail by the two 10M resistors. Shorting one of the gates with the ground rail by touching it (this is equivalent to connecting about 50K between gate and ground) FLIPS the output to that state. Shorting out the other contact FLOPs it back again. The output of the flip-flop drives a transistor connected as a switch. It switches an LED and a relay. The relay is rated to switch 240V. Connecting the two 1K resistors connects the other two NAND gates of the IC into the flip-flop and makes it much more sensitive with all four gates connected as flip flop.
