**H-Infinity Optimal Control and Related Minimax Design Problems** Tamer Başar, Pierre Bernhard, 2008-01-21 This book is devoted to one of the fastest developing fields in modern control theory the so called H infinity optimal control theory Based mostly on recent work by the authors the book is written on a good mathematical level Many results in it are original

**Minimax Methods in Critical Point Theory with Applications to Differential Equations** Paul H. Rabinowitz, Conference Board of the Mathematical Sciences, 1986-07-01 The book provides an introduction to minimax methods in critical point theory and shows their use in existence questions for nonlinear differential equations An expanded version of the author's 1984 CBMS lectures this volume is the first monograph devoted solely to these topics Among the abstract questions considered are the following the mountain pass and saddle point theorems multiple critical points for functionals invariant under a group of symmetries perturbations from symmetry and variational methods in bifurcation theory The book requires some background in functional analysis and differential equations especially elliptic partial differential equations It is addressed to mathematicians interested in differential equations and or nonlinear functional analysis particularly critical point theory [Minimax Approaches to Robust Model Predictive Control](#) Johan

Löfberg, 2003-04-11 Controlling a system with control and state constraints is one of the most important problems in control theory but also one of the most challenging Another important but just as demanding topic is robustness against uncertainties in a controlled system One of the most successful approaches both in theory and practice to control constrained systems is model predictive control MPC The basic idea in MPC is to repeatedly solve optimization problems on line to find an optimal input to the controlled system In recent years much effort has been spent to incorporate the robustness problem into this framework The main part of the thesis revolves around minimax formulations of MPC for uncertain constrained linear discrete time systems A minimax strategy in MPC means that worst case performance with respect to uncertainties is optimized Unfortunately many minimax MPC formulations yield intractable optimization problems with exponential complexity Minimax algorithms for a number of uncertainty models are derived in the thesis These include systems with bounded external additive disturbances systems with uncertain gain and systems described with linear fractional transformations The central theme in the different algorithms is semidefinite relaxations This means that the minimax problems are written as uncertain semidefinite programs and then conservatively approximated using robust optimization theory The result is an optimization problem with polynomial complexity The use of semidefinite relaxations enables a framework that allows extensions of the basic algorithms such as joint minimax control and estimation and approximation of closed loop minimax MPC using a convex programming framework Additional topics include development of an efficient optimization algorithm to solve the resulting semidefinite programs and connections between deterministic minimax MPC and stochastic risk sensitive control The remaining part of the thesis is devoted to stability issues in MPC for continuous time

nonlinear unconstrained systems While stability of MPC for unconstrained linear systems essentially is solved with the linear quadratic controller no such simple solution exists in the nonlinear case It is shown how tools from modern nonlinear control theory can be used to synthesize finite horizon MPC controllers with guaranteed stability and more importantly how some of the technical assumptions in the literature can be dispensed with by using a slightly more complex controller

**Minimax and Applications** Ding-Zhu Du, Panos M. Pardalos, 2013-12-01 Techniques and principles of minimax theory play a key role in many areas of research including game theory optimization and computational complexity In general a minimax problem can be formulated as  $\min_x \max_y f(x, y)$  where  $f(x, y)$  is a function defined on the product of  $X$  and  $Y$  spaces There are two basic issues regarding minimax problems The first issue concerns the establishment of sufficient and necessary conditions for equality  $\min_x \max_y f(x, y) = \max_y \min_x f(x, y)$  The classical minimax theorem of von Neumann is a result of this type Duality theory in linear and convex quadratic programming interprets minimax theory in a different way The second issue concerns the establishment of sufficient and necessary conditions for values of the variables  $x$  and  $y$  that achieve the global minimax function value  $\min_x \max_y f(x, y)$  There are two developments in minimax theory that we would like to mention

**Computerized Medical Diagnosis** Carlos Feder, 2006-12 This interdisciplinary book primarily introduces a novel algorithm that finally enables computers to efficiently diagnose diseases

Advances in Dynamic Games Michèle Breton, Krzysztof Szajowski, 2010-11-18 This book focuses on various aspects of dynamic game theory presenting state of the art research and serving as a testament to the vitality and growth of the field of dynamic games and their applications The selected contributions written by experts in their respective disciplines are outgrowths of presentations originally given at the 13th International Symposium of Dynamic Games and Applications held in Wrocław The book covers a variety of topics ranging from theoretical developments in game theory and algorithmic methods to applications examples and analysis in fields as varied as environmental management finance and economics engineering guidance and control and social interaction

**Frontiers of Statistical Decision Making and Bayesian Analysis** Ming-Hui Chen, Peter Müller, Dongchu Sun, Keying Ye, Dipak K. Dey, 2010-07-24 Research in Bayesian analysis and statistical decision theory is rapidly expanding and diversifying making it increasingly more difficult for any single researcher to stay up to date on all current research frontiers This book provides a review of current research challenges and opportunities While the book can not exhaustively cover all current research areas it does include some exemplary discussion of most research frontiers Topics include objective Bayesian inference shrinkage estimation and other decision based estimation model selection and testing nonparametric Bayes the interface of Bayesian and frequentist inference data mining and machine learning methods for categorical and spatio-temporal data analysis and posterior simulation methods Several major application areas are covered computer models Bayesian clinical trial design epidemiology phylogenetics bioinformatics climate modeling and applications in political science finance and marketing As a review of

current research in Bayesian analysis the book presents a balance between theory and applications The lack of a clear demarcation between theoretical and applied research is a reflection of the highly interdisciplinary and often applied nature of research in Bayesian statistics The book is intended as an update for researchers in Bayesian statistics including non statisticians who make use of Bayesian inference to address substantive research questions in other fields It would also be useful for graduate students and research scholars in statistics or biostatistics who wish to acquaint themselves with current research frontiers Partial Differential Equations and Spectral Theory Michael Demuth, Bert-Wolfgang Schulze, 2012-12-06

The intention of the international conference PDE2000 was to bring together specialists from different areas of modern analysis mathematical physics and geometry to discuss not only the recent progress in their own fields but also the interaction between these fields The special topics of the conference were spectral and scattering theory semiclassical and asymptotic analysis pseudodifferential operators and their relation to geometry as well as partial differential operators and their connection to stochastic analysis and to the theory of semigroups The scientific advisory board of the conference in Clausthal consisted of M Ben Artzi Jerusalem Chen Hua Peking M Demuth Clausthal T Ichinose Kanazawa L Rodino Turin B W Schulze Potsdam and J Sj strand Paris The book is aimed at researchers in mathematics and mathematical physics with interests in partial differential equations and all its related fields **New Trends in Systems Theory** Anna M.

Perdon, Bostwick Wyman, 1991-09 The University of Genoa Ohio State University Joint Conference on New Trends in Systems Theory was held at the Badia di S Andrea in Genoa on July 9 11 1990 This Proceedings volume contains articles based on two of the three Plenary talks and most of the shorter presentations The papers are arranged by author and no attempt has been made to organize them by topic We would like to thank the members of the Scientific Committee and of the Program Committee the speakers and authors and everyone who attended the conference Approximately 120 researchers and students from all over the world visited Genoa for the meeting representing a wide spectrum of areas in pure and applied control and systems theory The success of the conference depended on their high level of scientific and engineering expertise not to mention their enthusiasm The Conference on New Trends in Systems Theory would not have been possible without the help of a great many institutions and people We would like to thank the University of Genoa particularly Professor Enrico Beltrametti and the Ohio State University's Columbian Quincentenary Committee led by Professor Christian Zacher for encouragement and financial assistance The University of Genoa Mathematics Department and Communication Computer and System Sciences Department supplied assistance and technical help The staff of the Consorzio Genova Ricerche particularly Ms Piera Ponta and Ms Camilla Marconi worked diligently over many months and especially during the conference itself to insure a smooth and enjoyable meeting
