Resources in Education ,1975 **Cognitive Psychology and Instruction**

Alan Lesgold,2013-03-09 Sipke D Fokkema Amsterdam Free University From June 13th 17th 1977 the NATO International Conference on Cognitive Psychology and Instruction organized by the editors of this volume took place at the Free University of Amsterdam During this period approximately 150 psychologists representing 15 countries assembled for an exchange of scientific experiences and ideas The broad aim of the conference as indicated by its title was to explore the extent to which theoretical and methodological developments in cognitive psychology might provide useful knowledge with regard to the design and management of instruction From a great variety of submitted papers the organizers attempted to select those that represented major problem areas being scientifically studied in several countries For the organization of this book we chose to categorize the contributions according to the following general areas

- I Learning
- II Comprehension and Information Structure
- III Perceptual and Memory Processes in Reading
- IV Problem Solving and Components of Intelligence
- V Cognitive Development
- VI Approaches to Instruction

The final paper in the volume is an extensive review and summary by Glaser Pellegrino and Lesgold that examines the state Qf cognitive psychology mainly as reflected in the contributions in this volume with regard to instructional purposes Each of the sections of the book also begins with a brief overview of the specific topics considered by the individual contributors within that section

Construction of Arithmetical Meanings and Strategies Leslie

P. Steffe, Paul Cobb, 2012-12-06 The studies presented in this book should be of interest to anybody concerned with the teaching of arithmetic to young children or with cognitive development in general The eaching experiment was carried out with half a dozen children entering first grade over two years in biweekly sessions Methodologically the authors research is original It is a longitudinal but not a naturalistic study since the experimenter teachers directed their interaction with each individual child with a view to his or her possible progress It is experimental in the sense that two groups of subjects were selected according to criteria derived from an earlier study Steffe von Glasersfeld Richards but unlike more rigid and shorter learning or training studies it does not include pre and posttests or predetermined procedures Theoretically the authors subscribe to Piagefs constructivism numbers are made by children not found as they may find some pretty rocks for example or accepted from adults as they may accept and use a toy The authors interpret changes in the children s counting behaviors in terms of constructivist concepts such as assimilation accommodation and reflective abstraction and certain excerpts from protocols provide on line examples of such processes at work They also subscribe to Vygotsky s proposal for teachers 0 utilize the zone of proximal development and to lead the child to what he can not yet do 1965 p 104

The Emergence of Mathematical Meaning Paul Cobb, Heinrich Bauersfeld, 2012-12-06 This book grew out of a five year collaboration between groups of American and German mathematics educators The central issue addressed accounting for the messiness and complexity of mathematics learning and teaching as it occurs in classroom situations The individual chapters are based on the view that psychological and sociological perspectives each tell half of a good story To unify these concepts requires a combined approach that takes individual students mathematical activity seriously while simultaneously seeing their activity as necessarily socially situated Throughout their collaboration the chapter authors shared a single set of video recordings and transcripts made in an American elementary classroom where instruction was generally compatible

with recent reform recommendations As a consequence the book is much more than a compendium of loosely related papers The combined approach taken by the authors draws on interactionism and ethnomethodology Thus it constitutes an alternative to Vygotskian and Soviet activity theory approaches The specific topics discussed in individual chapters include small group collaboration and learning the teacher s practice and growth and language discourse and argumentation in the mathematics classroom This collaborative effort is valuable to educators and psychologists interested in situated cognition and the relation between sociocultural processes and individual psychological processes
