## The Endocrine System

**Introduction:** Hormones are often referred to as "chemical messengers." These tiny messengers are created and released by one organ, and into the bloodstream, and regulate the activity of another organ or cell. For example, adrenaline is created and released by the **adrenal glands**. It is sent into the bloodstream and has impacts on many other organs in our body, such as the heart. Adrenaline can only get heart rate to increase in a stressful situation. The **ovarian glands** and **testes** are in completely different body systems, but thanks to hormones these organs can "communicate."

Many organs in the human body. **Endocrine glands** are a smaller group of organs that make and release hormones into the bloodstream. These glands can be found throughout the body and collectively make up the **endocrine system**. In this activity, you will read about each endocrine gland, color it, and finally learn which hormones it produces.

1. What is a hormone?
2. What is an example of a hormone?
3. Which type of glands make hormones?

**Hypothalamus**

If you've studied the nervous system, you are familiar with the **hypothalamus**, a part of the brain. The **hypothalamus** receives information from the brain and bloodstream on the conditions of the body. It responds to this information by creating hormones, which it then sends to the **pituitary gland**, which hangs from the hypothalamus. The **pituitary gland** either responds to or sends these hormones back to the hypothalamus.

Two hormones that the hypothalamus makes and sends to the posterior **pituitary gland** are **oxytocin** and **antidiuretic hormone (ADH)**.

Color the hypothalamus and label it.

*Physiology Coloring Workbook* Kenneth Axen, Kathleen Vermitsky Axen, 1997 Physiology Coloring

Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively through coloring thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information: for example, arterial blood is always red, whereas venous blood is blue and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy, and rehabilitation, medical technology, nutrition, physical education, allied health, and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction. *McMurtrie's Human Anatomy Coloring Book* Hogin, McMurtrie, 2006. Each year, thousands of students studying to be doctors, physical therapists, and medical technicians have to master the art of anatomy, and an equal number of artists want to capture realistic movement and posture. What better way to remember each bone, muscle, and organ than by coloring a picture? The very act of drawing entices the student to spend more time with the image and to examine the body's structure more closely. That's why this one-of-a-kind coloring book, with its concisely written text and easy-to-color-in medical illustrations, has always been such a huge seller, and why it's now revised into this new user-friendly format. Arranged according to body systems, the color key organization links anatomical terminology to the more than 1,000 precise and detailed black-and-white illustrations. Readers will also appreciate the sleek lay-flat design, cardboard insert to place under the page for easy drawing, and high-quality paper that makes doing the work simpler and more pleasurable. *Human Anatomy, Color Atlas and Textbook E-Book* John A. Gosling, Philip F. Harris, John R. Humpherson, Ian Whitmore, Peter L. T. Willan, 2008-08-07. The new edition of this well-known text and atlas takes you from knowing human anatomical structures in the abstract to identifying human anatomy in a real body. It is the only text and atlas of gross anatomy that illustrates all structures using high-quality dissection photographs and clearly labeled line drawings for each photo. Plus, concise yet thorough text supports and explains all key human anatomy. High-quality, richly colored dissection photographs showing structures most likely to be seen and tested in the lab improve your ability to recognize and interpret gross specimens accurately. Interpretive line drawings next to every photograph let you test your knowledge by covering the labels. Color coding on interpretive artwork helps you differentiate among fat, muscle, ligament, etc. Clinical Skills pages help you understand how to apply knowledge of gross anatomy to the clinical setting. More clinical comments throughout the text further clarify anatomical drawings and photographs. Cross sections added to the upper and lower limb sections increase your knowledge base. Up to 50 new color photographs and new CAT scans and MRIs.
