ball nut. The left sector engages the right sector and rotates the same number of degrees in the opposite direction. The pitman arms transfer the motion of the sector to the splindle arms through the drag links to the front wheels.

STEERING GEAR ADJUSTMENT

When the wheels are in the straight-ahead position, all backlash should be removed. If the wheels are turned to the extreme right or left, slight backlash will be present, due to the gear tooth design. This characteristic permits a backlash adjustment for wear between the worm and teeth and the sector gears in the mesh used center position without causing binding or tightness in the sector gears and worm nut. Any adjustments necessary should be performed by your tractor dealer.
