Mental and Neurological Public Health Vikram Patel, Alistair Woodward, Valery Feigin, Stella R.

Quah, Kristian Heggenhougen, 2010-06-07 Colin Mathers who leads the Global Burden of Disease group in WHO has confirmed that in the 2004 GBD 13.1% of global Daily Adjusted Life Years are attributable to mental or neurological disorders. While the proportions vary very widely from about 10% in low income countries to over 25% in high income countries it is clear that there is a need for understanding how to address this issue. This volume aims to provide a comprehensive overview of the public health principles of mental and neurological disorders. This vast range of health conditions affects people across the life course from developmental disabilities in childhood to schizophrenia and substance abuse in adults and dementia in old age. Despite this diversity they all share many features: they are mostly mediated through brain dysfunction or abnormalities, are often chronic in course, typically benefit from multi-component interventions and are amongst the most neglected conditions in global health. The volume will bring together chapters from the Psychiatry, Neurology, Substance Abuse and Child Development sections of the Encyclopedia of Public Health. The volume will be the first comprehensive text on a public health approach to this diverse group of health conditions and has no obvious competitor. Highlights the common features of many mental and neurological disorders. Provides insights into potential cross-over methods of identification and treatment. Includes chapters on the most frequently diagnosed mental and neurological challenges faced by public health systems.

Handbook of Depression Edward S. Friedman, Ian M. Anderson, 2014-06-12 Depression is a common mood disorder that affects approximately 10% of the global population at some point in their lives and can cause serious psychological, physical and cognitive distress. Additionally, patients with depression are at a greater risk for cardiovascular disease, stroke, functional impairment, disability and all-cause mortality. Aside from the impact on the individual, this condition presents a very real economic burden as depression is the most predominant mental health problem among working age patients and the leading cause of lost work productivity. Despite advances in screening and treating depression in recent decades, a vast majority of patients with depression do not actively seek treatment and of those that do, only a quarter have been found to receive adequate and effective interventions. **Handbook of Depression, Second Edition** is a concise review of assessment tools available and emerging pharmacological and non-pharmacological treatment options and consensus management guidelines that center on enhancing the clinician-patient relationship and improving patient quality of life. Cowritten by expert US and UK-based authors, this handbook has an innovative global focus that consolidates current knowledge in a convenient pocket-sized guide that is ideal for every-day reference in a clinical setting.
