

GreenHydrogen electrolyser for onsite hydrogen generation at Nel refueling station in Sweden

Danish electrolyser manufacturer GreenHydrogen has received an order for a Hydrocell™ A60 alkaline electrolyser, for onsite hydrogen generation at the Nel hydrogen refueling station in Malmö in southern Sweden. This is the first time this electrolyser has been used for onsite generation of 'green' hydrogen at an off-grid hydrogen refueling station.

The project in Malmö will have access to GreenHydrogen's proven Nilsson Energy A60, also a proven refueling power. Nilsson Energy will deliver the solution comprising a solar photovoltaic (PV) installation, hydrogen storage system, PEM fuel cells and electrolyser as a ready-to-install in conjunction with the project partner that include Shell AB Sweden.

The hydrogen refueling station in Malmö was inaugurated in January, with hydrogen supplied in pressurized cylinders (CNG, July 2016, p.7). However, the City of Malmö and Vener Energi – the regional energy and utility company that operates the station – had already decided on the more sustainable way to generate green and off-grid with the refueling station in 2016. This would be achieved by adding solar power, which will be used for hydrogen generation, energy storage (as the form of both hydrogen storage and battery), and fuel cells for power generation and as backup for the scheduled power supply. The solution is designed for 24/7 operation, no more than that will electric vehicles can be refueled with green hydrogen at any time.

For the project, GreenHydrogen will deliver a complete, turn-key solution of the Hydrocell A60 – which produces 60 Nm³/h of hydrogen at 25 bar absolute pressure – and operate in conjunction with the Nel ETEncore® dispensing fuel cell. GreenHydrogen's Hydrocell A-series electrolyser are designed for renewable energy applications, and to operate dynamically with a fluctuating supply of power

from solar PV installations and wind turbines.

The project will be delivered and commissioning will start in 2018, and is planned to be in full operation by September 2018. Malmö is one of the most hydrogen fuelled, GreenHydrogen will be following with the use of the fuel cell power to generate a major expansion of its hydrogen refueling infrastructure, along with the deployment of a fleet of more than 100 H2FC's (July 2017, p.8).

In addition, GreenHydrogen has received an order for an advanced PEM electrolyser for hydrogen refueling stations in France, as part of advanced hydrogen energy systems developed by the French partner Mithras.

Five high schools have previously been selected for the Hydrogen-From-the-Cloud project, in various French, as participants in a project that will encourage students to use this technology and learn about hydrogen energy – and the ability to store renewable energy – in order to create a sustainable transport sector (September 2017, p.7). A series of conferences will be arranged for the schools for the students as well as their families, friends, and school staff.

The Mithras solution to generate renewable energy from hydrogen using a GreenHydrogen electrolyser. The hydrogen is used to regenerate with an 80 bar and in two very low pressure (near hydro) storage tanks, all produced by Mithras. The system also allows the hydrogen to be converted back into electricity using a fuel cell, while water is used as a hydrogen refueling station to fill a fuel cell power plant. This has advanced hydrogen energy using low-pressure technology, with a hybrid hydrogen fuel cell system to power the electric system, allowing the system to demonstrate how hydrogen applications and infrastructure can be made to work in practice.
