The Language of Science Ilse N. Bulhof,1992-09-01 The existence of a separation between science and literature has long been taken for granted This study shows that in science language functions in very much the same way as in literature it is rhetorical in that it persuades readers to the author s point of view and it is poetical in that with its metaphors and other figures of speech it shapes the experience of author and reader The separation between science and literature proves to be untenable This has important ontological implications science can no longer be considered an action performed by a speaking subject on a mute object Does the creative role of language in science mean that human beings create the world The author emphatically rejects a conclusion which would degrade nature to mere malleable material at the mercy of human beings A hermeneutical model for the relationship between knower and known is suggested creative interaction between reader and text The reader s responses actualise a text s meaning in like manner scientists give their responses to reality by actualising one of many possibilities The hermeneutical ontology proposed in this book steers away from the rocks of realism and anti realism
