Friendly Hints

- 1 If water supply cutoff occurs in your home, please disconnect the power. Before connecting power again, please open mixing valve to the hottest patch of the hot water, watch the differential until water comes out (indicating tank is full) and close mixing valve. This can ensure a longer life of heating element.
- 2 If you live in high-rise apartment with water pressure beyond rated range (e.g. more than 0.2 MPa), it is suggested you purchase a pressure reducing valve, which can ensure reliable operation and normal service life of the water heater.
- 3 To ensure water heater life, a magnesium rod is used to resist corrosion. Like a battery, magnesium rod is consumed and needs replacement. It is suggested you contact our after-sales service once in two years to purchase a replacement magnesium rod. This can ensure a much longer water heater life.

Note: Above hints only apply to electric water heaters.
