

Hair as Evidence

Hair is a common form of evidence in many criminal cases. It can link a suspect to the scene of a crime, it can show contact with a victim, and it can also serve to identify clothing or shoes abandoned by a suspect. Hair is a valuable tool because it can last much longer than many other types of evidence. It is also shed in fairly large amounts which often go unnoticed by people committing crimes.

Hair can be difficult to identify. Hair from different parts of the body exhibits a fairly wide range of characteristics. Usually a dozen hairs taken from different parts of a suspect's body are used for comparison.

Hair when seen under the microscope is composed of three parts – the cuticle, medulla and cortex. If you compare the hair to a pencil, the cuticle would be the paint on the outside, the cortex would be the wood, and the medulla would be the lead running down the center.

We are going to work with three factors used to identify hairs- scale pattern, medulla patterns, and medullary index.

Scale Patterns

Make a wet mount of a hair using glycerine and observe under the microscope. Observe the outside of the hair under 100X and 400X. By carefully adjusting the lamp and diaphragm you should be able to see one of the scale patterns shown below. Record the type of scale pattern on the data table.

Hair Analysis Lab Report:

Crime Lab Report John M. Collins, 2019-09-17 Crime Lab Report compiles the most relevant and popular articles that appeared in this ongoing periodical between 2007 and 2017. Articles have been categorized by theme to serve as chapters with an introduction at the beginning of each chapter and a description of the events that inspired each article. The author concludes the compilation with a reflection on Crime Lab Report, the retired periodical, and the future of forensic science as the 21st Century unfolds. Intended for forensic scientists, prosecutors, defense attorneys, and even students studying forensic science or law, this compilation provides much needed information on the topics at hand. Presents a comprehensive look behind the curtain of the forensic sciences from the viewpoint of someone working within the field. Educates practitioners and laboratory administrators providing talking points to help them respond intelligently to questions and criticisms whether on the witness stand or when meeting with politicians and or policymakers. Captures an important period in the history of forensic science and criminal justice in America. Developing Drug Testing by Hair Analysis Bernard A. Gropper, Judy A. Reardon, 1993. **Strengthening Forensic Science in the United States** United States Congress, House, Committee on Science and Technology (2007). Subcommittee on Technology and Innovation, 2009. **United States of America Ex Rel. Lewis V. Lane**, 1987. **Vegetarian Times**, 1982-09 To do what no other magazine does. Deliver simple delicious food plus expert health and lifestyle information that is exclusively vegetarian but wrapped in a fresh stylish mainstream package that is inviting to all. Because while vegetarians are a great vital passionate niche, their healthy way of eating and the earth friendly values it inspires appeals to an increasingly large group of Americans. VT's goal To embrace both **The Army Lawyer**, 2003. *NIJ Special Report: Using DNA to Solve Cold Cases, July 02*, Autopsy of a Crime Lab Brandon Garrett, 2022-03. This book exposes the dangerously imperfect forensic evidence that we rely on for criminal convictions. That is not my fingerprint, your honor, said the defendant after FBI experts reported a 100 percent identification. The FBI was wrong. It is shocking how often they are. Autopsy of a Crime Lab is the first book to catalog the sources of error and the faulty science behind a range of well known forensic evidence from fingerprints and firearms to forensic algorithms. In this devastating forensic takedown, noted legal expert Brandon L. Garrett poses the questions that should be asked in courtrooms every day. Where are the studies that validate the basic premises of widely accepted techniques such as fingerprinting? How can experts testify with 100 percent certainty about a fingerprint when there is no such thing as a 100 percent match? Where is the quality control at the crime scenes and in the laboratories? Should we so readily adopt powerful new technologies like facial recognition software and rapid DNA machines? And why have judges been so reluctant to consider the weaknesses of so many long accepted methods? Taking us into the lives of the wrongfully convicted or nearly convicted into crime labs rocked by scandal and onto the front lines of promising reform efforts driven by professionals and researchers alike, Autopsy of a Crime Lab illustrates the persistence and perniciousness of shaky science and its well meaning practitioners.
