10-6 Volume of Prisms and Cylinders

The **volume** of a three-dimensional figure is the number of nonoverlapping unit cubes of a given size that will exactly fill the interior.

Cavalieri's principle says that if two three-dimensional figures have the same height and have the same cross-sectional area at every level, they have the **same volume**.

A right prism and an oblique prism with the same base and height have the same volume.

10-6 Volume of Prisms and Cylinders

Volume of a Prism

The volume of a prism with base area B and height h is $V = Bh$.

The volume of a right rectangular prism with length l , width w , and height h is $V = lwh$.

The volume of a cube with edge length s is $V = s^3$.

10-6 Volume of Prisms and Cylinders
